**1.2 MATERIALS** The principal materials to which these specifications apply are aluminium alloys that comply with AS 1734, AS 1865, AS 1866, AS 1867 and AS 2848.1. Those structural members frequently used are listed in Table 3.3(A).

## **1.3 SAFETY FACTORS**

**1.3.1 Building type structures** Basic allowable tensile stresses for buildings, structural supports for highway signs, luminaires, traffic signals and similar structures shall be the lesser of the minimum yield strength divided by a factor of safety of 1.65, or the minimum ultimate tensile strength divided by a factor of safety of 1.95. Other allowable stresses for buildings and similar structures shall be based upon the factors of safety shown in Table 3.4(A).

**1.3.2 Bridge type structures** Basic allowable tensile stresses for bridge type structures shall be the lesser of the minimum yield strength divided by a factor of safety of 1.85, or the minimum ultimate tensile strength divided by a factor of safety of 2.2. Other allowable stresses for bridge and similar structures shall be based upon the factors of safety shown in Table 3.4(A).

**1.3.3 Other type structures** Where it is customary or standard practice to use factors of safety other than those given in Clauses 1.3.1 or 1.3.2, the general formulas in Table 3.4(C) shall be permitted to be used with the desired factors of safety substituted for  $n_x$ ,  $n_y$  or  $n_z$ .

## **SECTION 2 DESIGN PROCEDURE**

**2.1 PROPERTIES OF SECTIONS** Properties of sections, such as cross-sectional area, moment of inertia, section modulus, radius of gyration and torsion constants, shall be determined in accordance with accepted methods of structural analysis.

Behavior and Design of Aluminum Structures Maurice L. Sharp,1993      *Fatigue Design of Aluminum Components and Structures* Maurice L. Sharp,Glenn E. Nordmark,Craig C. Menzemer,1996 Focusing on the design challenges associated with using aluminum in such fatigue critical applications as highway infrastructures transportation vehicles automotive suspension systems and aircraft and machine parts this reference gives the data and guidelines that mechanical and civil design engineers need to meet these challenges head on      Structural Behavior and Design of Two Custom Aluminum Extruded Shapes in Custom Unitized Curtain Wall Systems ,2006 The focus of the research in this thesis is on the structural behavior and design of two aluminum E type structural sections that are used in unitized curtain wall systems today Moment capacities of the two E type sections as one are analyzed by three methods hand calculations using Minimum Moment Capacity Approach and Total Moment Capacity Approach the finite element method using ABAQUS program and via an experimental investigation A comparison of moment capacities determined using the three methods is presented Upon the evaluation and comparison of the results obtained by the three methods in this study the Total Moment Capacity Approach is determined to be an accurate method to predict moment capacities of the two E type structural sections functioning as one structural member and is recommended for the evaluation of moment capacities of complex thin walled sections and assembled sections to supplement the Specification for Aluminum Structures 2000      **Handbook of Structural Engineering** W.F. predicted by the finite element analysis were compared with the design strengths calculated using the current American Australian New Zealand and European specifications for aluminum structures In addition the direct strength method which was originally developed for
