Behavior Psychological Man:

Operationism in Psychology Uljana Feest, 2025-03-11 Analyzes psychological research to offer insights into how methodological and ontological questions are intertwined Psychology has seen an intense debate about the lack of replicability of results in recent years Uljana Feest uses history and philosophy of science to shed light on the nature of experiment in psychology in general but her aim reaches beyond debates about replication to provide a novel and comprehensive analysis of the investigative process in experimental psychology She shows that the central unit of analysis for our epistemological considerations of psychological research should be not theories but rather concepts Her guiding question is How do psychological concepts figure in the experimental exploration of the objects of psychological research For Feest this question has two intertwined aspects What role do concepts play in the design of experiments and the production of data and how can concepts be revised or adapted in response to experimental results Following the historical trajectory of debates about operationism in psychology she argues that this debate was not concerned with philosophical theories of meaning but instead closely connected to the investigative practices of experimental psychologists The book offers a broad analytical framework for thinking philosophically about the investigative process in psychology including analyses of the relationship between data and phenomena in psychology the relationship between folk and scientific psychological concepts the relationship between genuine results and experimental artifacts and the nature and exploration of psychological kinds

Handbook of Behavioural Economics and Smart Decision-Making Morris Altman, 2017-05-26 This Handbook is a unique and original contribution of over thirty chapters on behavioural economics examining and addressing an important stream of research where the starting assumption is that decision makers are for the most part relatively smart or rational This particular approach is in contrast to a theme running through much contemporary work where individuals behaviour is deemed irrational biased and error prone often due to how people are hardwired In the smart people approach where errors or biases occur and when social dilemmas arise more often than not improving the decision making environment can repair these problems without hijacking or manipulating the preferences of decision makers This book covers a wide range of themes from micro to macro including various sub disciplines within economics such as economic psychology heuristics fast and slow thinking neuroeconomics experiments the capabilities approach institutional economics methodology nudging ethics and public policy

Behavior and Psychological Man Edward Chace Tolman, 1951 **Metaphors in the History of Psychology** David E. Leary, 1994-07-29 Arguing that psychologists and their predecessors have invariably relied on metaphors in articulation the contributors to this volume offer a new key to understanding a critically important area of human knowledge by specifying the major metaphors *Handbook of Behaviorism* William O'Donohue, Richard Kitchener, 1998-10-21 Handbook of Behaviorism provides a comprehensive single source that summarizes what behaviorism is how the various flavors of behaviorism have differed between major theorists both in psychology and philosophy and what

aspects of those theories have been borne out in research findings and continue to be of use in understanding human behavior

Beyond Behaviorism Vicki L. Lee, 2016-07-15 Originally published in 1988 this title explores and contrasts means and ends psychology with conventional psychology that of stimuli and response The author develops this comparison by exploring the general nature of psychological phenomena and clarifying many persistent doubts about psychology She contrasts conventional psychology stimuli and responses involving reductionistic organocentric and mechanistic metatheory with alternative psychology means and ends that is autonomous contextual and evolutionary

From Darwin to Behaviourism Robert Boakes, 1984-04-19 This volume surveys the way that understanding of the minds of animals and ideas about the relationship between animal and human behaviour developed from around 1870 to 1930 In describing the research and theories which contributed to these developments this book looks at the people who undertook such studies and the reasons why they did so Its main purpose is to examine the different ways in which the outcome of this work affected their ideas about the human mind and exerted such a formative influence on psychology in general This book will be used by first and second year undergraduates studying psychology and will also appeal to students of the history of science and philosophy In addition the lucid non technical style of this book will provide an excellent introduction to the general reader who would like to know more about this interesting subject

Public Administration U.C. Mandal, J. Rawat, 1998-03

Expectations and Actions Norman T. Feather, 2021-12-29 Originally published in 1982 this book examines the current status of expectancy value models in psychology The focus is upon cognitive models that relate action to the perceived attractiveness or aversiveness of expected consequences A person's behavior is seen to bear some relation to the expectations the person holds and the subjective value of the consequences that might occur following the action Despite widespread interest in the expectancy value valence approach at the time there was no book that looked at its current status and discussed its strengths and its weaknesses using contributions from some of the theorists who were involved in its original and subsequent development and from others who were influenced by it or had cause to examine the approach closely This book was planned to meet this need The chapters in this book relate to such areas as achievement motivation attribution theory information feedback organizational psychology the psychology of values and attitudes and decision theory and in some cases they advance the expectancy value approach further and in other cases point to some of its deficiencies
