## **Behind The Border:**

Border and Behind-the-Border Trade Barriers and Country Exports Azim M. Sadikov,2007-12 How do signatures required for exporting and business registration procedures affect the volume and composition of country s exports To answer this question I develop a model where a country can export two types of products differentiated and homogeneous I show that export signatures and registration procedures reduce overall exports by increasing transaction costs The impact however varies across goods according to the product s degree of differentiation the lack of price data on differentiated products due to their heterogeneity makes them more sensitive to export signatures Regressions show that each extra signature exporters have to collect before a shipment can take place reduces aggregate exports by 4.2 percent The impact is large equivalent to raising importer s tariff by 5 percentage points Furthermore each signature lowers exports of differentiated products by 4.5 percent more than exports of homogeneous goods I find evidence that business registration procedures affect exports of differentiated products only
