PROBLEM SOLVING

Using Whole Number Computation

Word problems typically involve a real-world scenario that requires you to identify relevant information, determine what mathematical operations are needed to solve the problem, and then carry out those operations to find a solution. There are many strategies that can help you understand and solve word problems.

The FAST Method

When solving word problems, use the FAST method to help you understand the problem.

FACTS <ul style="list-style-type: none"> What do you know? What do you need to know? 	ACTION <ul style="list-style-type: none"> Plan: How are you going to solve? Operational?
SOLVE <ul style="list-style-type: none"> Show your work mathematically, visually, using words, etc. 	THINKING <ul style="list-style-type: none"> Is your answer reasonable? Justify your answer!

Example: Jerome has 20 cents. He has four times as many cents as Jasper. How many cents did Jasper have?

FACTS: We know that Jerome has 20 cents and that Jerome has 4 times as many cents as Jasper. How many cents did Jasper have?

OPERATION: If we know Jerome has 20 cents, how many times as many cents as Jasper does he have?

ACTION: We have the total but we don't know the 4 times number. We can use all the pieces of 1 cent to make 20 cents. 20 is 4 equal groups of 5 cents.

THINKING: Based on the problem, Jerome has four times as many cents as Jasper. So the answer is reasonable if Jasper has 5 cents, 20 is 4 equal 5 cents units. Justify the problem.

Word Problem Situations

To be successful with problem solving, you must be able to identify what is happening in the problem. You can do this by visualizing the situation and creating a mental picture of the actions taking place. Once you understand the actions, you can connect them to operations.

Common Situations

ADDITION	SUBTRACTION	MULTIPLICATION	DIVISION
<ul style="list-style-type: none"> Combining two or more amounts. Finding the total amount of separate amounts of something. When you have the parts and need to figure out the whole. 	<ul style="list-style-type: none"> Finding the difference between two amounts. Finding how much more or how much less. Finding the total factor. Calculating the change when spending money. When you have the whole and want to find a part. 	<ul style="list-style-type: none"> Using equal groups and finding the total. Finding a part (fraction) of a whole number. Repeating to determine the amount you need for a number of groups or a number of something. 	<ul style="list-style-type: none"> Using a total amount and finding the number of groups. Using a whole amount and finding a part. Using a total amount of something and finding the number of groups.

Beginning Teacher A Practical Guide To Problem Solving:

Humanism and Behaviorism in Physical Education Robert E. Gensemer, Robert J. Krajewski, Robert Baird Shuman, 1979
This book offers analyses applications and a combined form of behaviorism and humanism as they relate to the teaching of physical education The composition of the two systems is explored pragmatically with an overall objective of assisting teachers in their endeavors to make teaching and learning more efficient effective and rewarding The differences between the two philosophies are apparent humanism assigns the responsibility for learning to the student while behaviorism assigns the responsibility for learning to the teacher Humanism is concerned with self directed activity such as creativity and self discovery Applying humanism to a physical education course entails creating an environment of psychological intellectual and physical movement freedom The behaviorist model of teaching represents a branch of psychology which relies on a stimulus response view of education The central idea of behaviorism is that behavior is affected by its consequences and the future occurrence of behaviors is influenced by the way in which the environment usually people responds to those behaviors An effective combination of both systems which at first glance seems antithetical would use the following steps 1 identify specific target behaviors 2 select the educational experiences 3 organize the educational experiences and 4 evaluate the effect FG
