Integrated behavioral health care is a health care service delivery system in which behavioral health care is coordinated with primary medical care Unlike older approaches to patient care in which mental health professionals worked separately from medical professionals integrated care recognizes that many patients present to medical professionals with behavioral problems For example diabetics or persons suffering from chronic pain may experience depression Thus patients often need some combination of both behavioral and medical treatment Integrated care attempts to overcome the traditional division of care so that a coordinated multidisciplinary approach is taken to provide more appropriate care for patients In this comprehensive step by step guide a team of national experts in integrated behavioral health care discusses the economic clinical administrative and procedural issues involved in designing implementing and maintaining a successful integrated care delivery system Among the specific topics discussed are psychopharmacology the Biodyne model focused intermittent psychotherapy throughout the life cycle guidelines for the treatment of major depression panic disorder substance abuse and attention deficit hyperactivity disorder disease management groups treatment adherence patient access to behavioral health care through the primary care provider and treating special problems related to the elderly and women s health care This
