

...ity, which is a handbook for teaching the design of steel structures in ... is essential for the knowledge of every designer who

There are 2 chapters on the behaviour of steel under tension, compression, bending, or torsion. Other chapters deal with the local buckling of plates under in-plane loading, and with the lateral-torsional buckling of beams. Also treated are the cyclic behaviour, lateral buckling, thermal bending of members subjected to both axial and transverse loads, and of tapered frames, and of the behaviour of connections. Explanations are given of the behaviour of the design classes of BS5950, and illustrated by an extensive set of worked examples.

The emphasis is placed on the development of an understanding of behaviour, analytical details are either omitted or brought to a descriptive explanation, is relegated to appendices. The many worked examples both illustrate the theory of steel structures, and exemplify details of the design process.

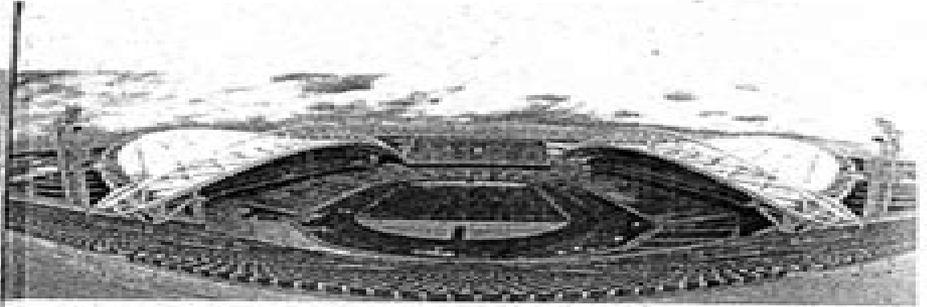

The authors and design of steel structures to BS5950 is an essential text for senior undergraduate and postgraduate students, and a useful handbook for practicing engineers in the UK and other countries.
