Behind The Camera:

Camera Craft ,1921 **Behind the Camera** Chelsea Curto,2024-03-19 Maven Wood is ready for a fresh start After an injury on the soccer field leads to her dropping out of college she needs a change When her godfather the coach of the hottest team in the NFL tells her about an open position as a sports photographer she jumps at the chance to apply The pay is good but it doesn't cover her rent after her roommate moves out Out of ideas she's not sure how she's going to afford to make ends meet until the cute kicker comes to her rescue Dallas Lansfield never thought he'd be a single dad but he's embracing the role as best as he can With a four year old that has too much energy and not enough time on his hands he needs help Desperately So when he hears that his coach's goddaughter is looking for a way to make more money he practically begs her to come be his nanny Maven and Dallas aren't allowed to fall for each other Getting involved with a player on the team is off limits and a quick way to get fired But what starts as a professional relationship turns into something deeper In front of people they're colleagues Behind the cameras though their attraction only grows Late night talks turn into sharing a bed and soon Dallas would rather give up his career than give up the feelings he has for Maven He can't have her So why does he want her so damn bad Behind the Camera is a spicy single dad nanny romance with no other woman drama and a guaranteed happily ever after

Prince,2012-06-18 This modern treatment of computer vision focuses on learning and inference in probabilistic models as a unifying theme It shows how to use training data to learn the relationships between the observed image data and the aspects of the world that we wish to estimate such as the 3D structure or the object class and how to exploit these relationships to make new inferences about the world from new image data With minimal prerequisites the book starts from the basics of probability and model fitting and works up to real examples that the reader can implement and modify to build useful vision systems Primarily meant for advanced undergraduate and graduate students the detailed methodological presentation will also be useful for practitioners of computer vision Covers cutting edge techniques including graph cuts machine learning and multiple view geometry A unified approach shows the common basis for solutions of important computer vision problems such as camera calibration face recognition and object tracking More than 70 algorithms are described in sufficient detail to implement More than 350 full color illustrations amplify the text The treatment is self contained including all of the background mathematics Additional resources at www.computervisionmodels.com **The Amateur Photographer and Photographic News** Charles W.
