**Basic Radar Analysis, Second Edition** Mervin C. Budge, Shawn R. German, 2020-04-30 This highly anticipated second edition of an Artech House classic covers several key radar analysis areas: the radar range equation, detection theory, ambiguity functions, waveforms, antennas, active arrays, receivers, and signal processors. CFAR and chaff analysis. Readers will be able to predict the detection performance of a radar system using the radar range equation, its various parameters, matched filter theory, and Swerling target models. The performance of various signal processors: single pulse, pulsed Doppler, LFM, NLFM, and BPSK are discussed, taking into account factors including MTI processing, integration gain, weighting loss, and straddling loss. The details of radar analysis are covered from a mathematical perspective, with in-depth breakdowns of radar performance in the presence of clutter. Readers will be able to determine the noise temperature of a multi-channel receiver as it is used in active arrays. With the addition of three new chapters on moving target detectors, inverse synthetic aperture radar, ISAR, and constant false alarm rate, CFAR, and new MATLAB codes, this expanded second edition will appeal to the novice as well as the experienced practitioner.
