Design Of Survivable Networks Lecture Notes In Mathematics 1531:

Design of Survivable Networks Mechthild Stoer, 1992-12-14 The problem of designing a cost efficient network that survives the failure of one or more nodes or edges of the network is critical to modern telecommunications engineering The method developed in this book is designed to solve such problems to optimality In particular a cutting plane approach is described based on polyhedral combinatorics that is able to solve real world problems of this type in short computation time These results are of interest for practitioners in the area of communication network design The book is addressed especially to the combinatorial optimization community but also to those who want to learn polyhedral methods In addition interesting new research problems are formulated
