Designs For Life:

Materials and Design Michael F. Ashby, Kara Johnson, 2002-10-08 The history of man is recorded, recovered and remembered through the designs he created and the materials he used. Materials are the stuff of design and today is not the age of just one material but of an immense range. Best-selling author M. F. Ashby guides the reader through the process of selecting materials on the basis of their design suitability. He and co-author Kara Johnson begin with the assumption that products in a given market sector have little to distinguish between them in either performance or cost. When many technically near-equivalent products compete, market share is won or lost by the industrial design of a product: its visual and tactile attributes, the associations it carries, the image it creates in the consumer's mind, and the quality of its interface with the user and the environment. Ashby and Johnson address the problem of selecting materials for industrial design from a unique viewpoint. They acknowledge that materials have two overlapping roles: in technical design and in industrial design. The technical designer has ready access to materials information; industrial designers often do not. *Materials Selection in Industrial Design* presents groundbreaking new information that, on one hand, introduces engineering students to the principles of Industrial Design and to the idea that the selection of materials can directly affect the aesthetic qualities of the object. On the other hand, they introduce industrial design students and practising industrial designers to engineering parameters through an accessible and holistic approach. Easy to use, systematic approach to the selection and uses of materials. Many excellent attribute maps are included which enable complex comparative information to be readily grasped. Full-colour photographs and illustrations throughout aid the understanding of concepts. *Integrated Drainage Systems: Planning and Design for Municipal Engineers* Patrick Ssempeera, 2023-05-05 Urban water management has to take an integrated approach that prioritizes sustainable drainage systems (SuDS) over grey infrastructure. This book elaborates on the planning and evaluation of pipework drainage systems with a focus on modern-day constraints to deliver a solution that favors sustainability as the overarching goal. The book includes a technical section on design of grey and green infrastructure, considering the total lifecycle costs of drainage systems. Advanced computer simulation techniques are discussed after covering the derivation of both standard and empirical equations for appropriate hydrology and hydraulics. The book provides an incorporation of reliability analyses for both green and grey infrastructure, starting with techniques for forecasting flows, hydraulic performance, and lifecycle costs. The work also involves 3D modeling, geospatial and big data analysis, and how these techniques are applied into city management, particularly beneficial to municipal engineers who are increasingly becoming involved in mapping the underground. Soil mechanics and subsurface drainage systems are analyzed, and structural aspects of sewers are included. Finally, soil behavior in shear retaining wall structures and tunneling is briefly featured in the book. This book will be of interest to undergraduate and postgraduate engineering students, drainage engineers, urban planners, architects, water engineers, developers, construction contractors, and municipal engineers. **Designing for**
