

## Chapter 5 – Elasticity and Its Applications

Do they depend both on the numbers of firms and on the price?

- What is elasticity? What kinds of factors can increase, decrease, or leave unchanged?
- What is the price elasticity of demand? How is it related to the demand curve? How is it related to demand's steepness?
- What is the price elasticity of supply? How is it related to the supply curve?
- What are the income and cross-price elasticities of demand?

Key concepts:

Two things influence the level of demand:

the change in the number of consumers and changes in the consumers per consumer.

How can a rise in the price of a good affect the opportunity cost of your time, and give the blessing of giving your time to it?

How can a decrease in the price of a good lead to a rise in demand? If you have your good, how many more services? How much will your demand fall, or might it even increase?

Measures:

- **Price Elasticity of Demand** measures how much the quantity demanded of a good or service changes in response to a change in the price of that good or service.
  - One type of elasticity measures how much demand for one variable will fall if another variable rises.
- **Income**
  - Changes in the nominal measure of the income levels of  $Q^D$  or  $Q^S$  is one of the determinants.

Price Elasticity of Demand

- Price elasticity of demand measures how much  $Q^D$  responds to a change in  $P$ .
- It measures the price sensitivity of consumers' demand.

$$\text{Price elasticity of demand} = \frac{\text{Percentage change in } Q^D}{\text{Percentage change in } P}$$

Along a demand curve,  $P$  and  $Q$  move in opposite directions, which usually makes price elasticity negative. We will look at this sign, and learn different methods to compute it.

**Example:**

The price elasticity of demand is 0.5. If the price of a good falls by 10%, the quantity demanded will rise by 5%.

**Calculating Percentage Changes**

• Price falls from \$10 to \$9, a change of (10-9)/10

• Quantity falls

• Price falls by 10% (10-9)/10, quantity falls by 5% (10-9.5)/10
