Oceanography P. Tchernia,1980 **Future Energy** Trevor Letcher,2020-01-18 Future Energy Improved Sustainable and Clean Options for Our Planet Third Edition provides scientists and decision makers with the knowledge they need to understand the relative importance and magnitude of various energy production methods in order to make the energy decisions necessary for sustaining development and dealing with climate change The third edition of Future Energy looks at the present energy situation and extrapolates to future scenarios related to global warming and the increase of carbon dioxide and other greenhouse gases in the atmosphere This thoroughly revised and updated edition contains over 40 chapters on all aspects of future energy with each chapter updated and expanded by expert scientists and engineers in their respective fields Provides readers with an up to date overview of available energy options both traditional and renewable as well as the necessary tools needed to make informed decisions Covers a wide spectrum of future energy resources presented in a single book with chapters written by experts from each particular field Includes many new chapters that cover topics on conventional oil and fossil fuels a new section on energy storage and a look at new energy **Cartinform** , *Equatorial and A-scale Oceanography* Walter Düing,1980 Regional Oceanography M. Tomczak,J. Stuart Godfrey,1994 The Tomczak and Godfrey textbook on regional oceanography is particularly appreciated The chapters focus on ocean climate issues but provide a basic appreciation of regional oceanography that will serve all those interested in the ocean While the textbook is geared to the undergraduate it contains enough detail for the professional oceanographer and graduate student Bulletin of the American Meteorological Society It is an excellent text for both students and researchers seeking a description of ocean physics and I have no hesitation in recommending it Tomczak and Godfrey present a description of the oceans which is built on a minimum yet sufficient set of physical and mathematical rules The standard of presentation and editing is high throughout this book The book is extremely well researched Australian Meteorological Magazine an excellent book for both the beginner and professional climatologist who needs to know about the ocean International Journal of Climatology

Analysis of Toxic and Non-toxic Alexandrium (Dinophyceae) Species Using Ribosomal RNA Gene Sequences Christopher Alan Scholin,1993 Sequences of small subunit Ss and large subunit Ls ribosomal RNA genes rDNA from the marine dinoflagellates *Alexandrium tamarense* *A. catenella* *A. fundyense* *A. affine* *A. minutum* *A. lusitanicum* and *A. andersoni* were compared to assess the organisms relationships Cultures represent isolates from North America Western Europe Thailand Japan Australia and the ballast water of several cargo vessels and include both toxic and non toxic strains An emphasis was placed on the *A. tamarense* *catenella* *fundyense* species complex a group of morphotypically similar organisms found in many regions of the world Two distinct SsrRNA genes termed the A gene and the B gene were found in a toxic *A. fundyense* isolated from eastern North America The B gene is considered to be a pseudogene A restriction fragment length polymorphism RFLP assay developed to detect the A and B genes revealed five distinct groups of *Alexandrium* isolates Three subdivide the *A. tamarense* *catenella* *fundyense* complex but do not correlate with morphospecies designations The two remaining groups are

associated with cultures that clearly differ morphologically from the A tamarensis catenella fundyensis group the fourth group consists of A affine isolates and the fifth group is represented by A minutum A lusitanicum and A andersoni The B gene was only found in A tamarensis catenella fundyensis but not in all members of this species complex The B gene is not uniformly distributed among global populations of Alexandrium All A tamarensis catenella fundyensis isolates from North America harbor this gene but it has also been found in some A tamarensis from scattered locations in Japan as well as in A tamarensis from the ballast water of one cargo vessel which was on a defined run from Japan to Australia The B gene may be endemic to North American populations of A tamarensis catenella fundyensis It is possible that in the recent past North American A tamarensis were introduced to Japanese waters and cysts of these organisms have been transported from Japan to Australia A subset of isolates examined using the the RFLP assay were also compared by cloning and sequencing a fragment of their LsrDNA Eight major classes of LsrDNA sequences termed ribotypes were identified Five ribotypes subdivide members of the A tamarensis catenella fundyensis complex all isolates containing the B gene cluster as one ribotype The three remaining ribotypes are typified by 1 A affine 2 A minutum and A lusitanicum and 3 A andersoni LsrDNAs from A minutum and A lusitanicum are indistinguishable A minutum lusitanicum andersoni may represent another Alexandrium species complex analogous to the A tamarensis catenella fundyensis group An organisms ability to produce toxin appears to be correlated with its LsrDNA phylogenetic lineage Ribotypes ascribed by the LsrDNA sequences are in complete agreement with and offer a finer scale resolution of groups defined by SsrDNA restriction patterns The SsrDNA RFLP groups and LsrDNA ribotypes are useful species and population specific markers Alexandrium tamarensis catenella fundyensis exist as genetically distinct strains populations not three genetically distinct species representatives collected from the same geographic region appear the most similar regardless of morphotype whereas those from geographically separated populations are more divergent even when the same morphospecies are compared Contrary to this general pattern A tamarensis catenella from Japan were found to be exceptionally heterogeneous Ballast water samples show that viable cysts resting spores of toxigenic A tamarensis catenella are being discharged into Australian ports from multiple genetically distinct source populations The rDNA sequences were also used to test theories accounting for the evolution and global dispersal of A tamarensis catenella fundyensis Results suggest a monophyletic radiation of these organisms from a common ancestor that included or gave rise to multiple morphotypes Populations appear to have diverged as a result of vicariance geographic isolation The co occurrence of genetically distinct strains of these organisms is an indication of dispersal An example of this is seen in Japan where an introduction of North American A tamarensis appears likely Determining the timing of dispersal events is problematic if based strictly on rDNA sequence similarities since these molecules undergo change on a scale of millions of years
