Juster, 2004-04-30 This book will be the first proceedings of a series of symposia on the exchange of best practices and research in engineering design and manufacture organized focusing on Europe and Asia by a group of researchers from European and Asian Universities working on several EU funded projects This very first book will explore the difference and communalities of European and Asian research and practice in this very important field With the rapid economic expansion of Asia and the gradual shift of manufacturing from Europe and the USA to Asia this Symposium will provide a timely forum for leading researchers in the field to exchange their research findings and experience The book covers this first symposium and aims to give insights to these on going changes shows their implications from design and manufacture perspective for both Europe and Asia and identifies new research topics to improve industrial practice The primary audience of this book are researchers in the field of engineering design and manufacture industrialists and business persons who are interested in finding out the state of design and manufacture in Asia and Europe Brain-Inspired Cognitive Architectures for Artificial Intelligence: BICA*AI 2020 Alexei V. Samsonovich, Ricardo R. Gudwin, Alexandre da Silva Simões, 2020-12-08 The book focuses on original approaches intended to support the development of biologically inspired cognitive architectures It bridges together different disciplines from classical artificial intelligence to linguistics from neuro and social sciences to design and creativity among others The chapters based on contributions presented at the Eleventh Annual Meeting of the BICA Society held on November 10 14

2020 in Natal Brazil discuss emerging methods theories and ideas towards the realization of general purpose humanlike artificial intelligence or fostering a better understanding of the ways the human mind works All in all the book provides engineers mathematicians psychologists computer scientists and other experts with a timely snapshot of recent research and a source of inspiration for future developments in the broadly intended areas of artificial intelligence and biological inspiration

Self-Destruction of Complex Systems Kirill Postoutenko,2025-01-27 This book is the first attempt to provide a general theory of self destruction in complex systems applicable to natural social and cultural phenomena The contributors work collaboratively to prove that many of the nondistributed complex systems in nature and society sooner or later experience critical development leading to unintended and irreversible self annihilation The individual chapters also show that the relations of such systems to their own distinctiveness and other systems may result in specific communicative pathologies such as redundancy inflation and noisy signalling which tend to mitigate or reinforce each other depending on circumstances Finally the volume updates some popular models of systemic self destruction from autoimmunity and self organized criticality to imperial overstretch and discusses some prominent cases from supernova explosions to the civil war following the Russian Revolution of 1917 The interdisciplinary style of narration ensures the accessibility of the materials and theories presented for the specialists and students from different fields As such it will appeal to those interested in complexity studies from the areas of sociology history media and communication studies immunology computer science literary criticism cultural studies political science and international relations
