Taxonomic AIDS

Taxonomical Aids

- Taxonomic studies of various species of plants, animals and other organisms are useful in agriculture, forestry, industry and in general in knowing our bio-resources and their diversity.
- These studies would require correct **classification and identification** of organisms.
- Identification of organisms requires **intensive laboratory and field studies**.
- The collection of actual specimens of plant and animal species is essential and is the prime source of taxonomic studies.
- It is used for classification of an organism, and the information gathered is also stored along with the specimens. In some cases the specimen is preserved for future studies.
- Biologists have established certain procedures and techniques to store and preserve the information as well as the specimens. Some of these taxonomic aids are explained below

1. Herbarium

- Herbarium is a **store house** of collected **plant specimens that are dried, pressed and preserved on sheets**.
- Further, these sheets are arranged according to a universally accepted system of classification.

- These specimens, along with their descriptions on herbarium sheets, become a store house or repository for future use .
- The herbarium sheets also carry a label providing information **about date and place of collection, English, local and botanical names, family, collector's name, etc.**
- Thus Herbaria also serve as quick referral systems in taxonomical studies.

2. Botanical Garden

- These specialised gardens have **collections of living plants for reference**.
- Plant species in these gardens are grown for identification purposes and each plant is labelled indicating its **botanical/scientific name and its family**.

The famous botanical gardens (Royal botanical garden) are at Kew (England),

Indian Botanical Garden, Howrah (India) and at National Botanical Research Institute, Lucknow (India).

3. Museum

- Museums have collections of **preserved plant and animal specimens** for study and reference.
- Specimens are preserved in the containers or jars in preservative solutions.
- Plant and animal specimens may also be preserved as dry specimens.
- Insects are preserved in **insect boxes** after **collecting, killing and pinning.**
- Larger animals like birds and mammals are usually **stuffed** and preserved.
