

What Are Schemas and Why Are They Important?

Schemas are repeatable patterns of actions that children follow to learn how things work or to explore and test out ideas about the world around them. They're an important part of learning.

When children repeat actions, it supports their brain development as they make connections and build schemas. This allows them to discover an awareness and understanding of the world around them.

As children grow, so do their schemas. They're always changing and evolving. This is why it's so important to have a variety of experiences for children to explore and test out ideas about the world around them.

What Types of Schemas Are There?

Schemas include:

- moving objects from place to place (transporting)
- collecting things (collecting)
- stacking (going up and down)
- locomotion (back and forth)
- putting things inside other things (enclosing)
- exploring objects that go round and round (rotational)
- learning about cause and effect (switching)
- going over and under, going through and around a boundary (transformation)
- placing objects in lines, patterns or rows (ordering)
- containing and enclosing space (enveloping)
- **new!** playing with numbers and shapes (mathematics)

What Can Schemas Look Like in Children's Behaviour?

Schemas include:

Children will often be engaged in repeat of actions that explore play and to understand a concept, such as:

- moving things
- stacking blocks
- stacking toys
- using repeated things
- collecting objects (e.g.)

It is therefore important for us, as teachers, to be aware of children's schemas and to be able to support them in their exploration of the world around them. This is why it's so important to have a variety of experiences for children to explore and test out ideas about the world around them.

When you see children:

- become fully engaged and focused
- play in a determined way
- repeat an action over and over
