T. Rhodes,2012-06-15 It s impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It s a survival issue This is the only planet we have We re stuck here and we don t own the place it would be the height of arrogance to assume that we do We re tenants here not owners but we re tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant s Manual In Earth A Tenant s Manual the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth s livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and

the clashes over the energy resources needed for the Earth's exploding population. He concludes with an extended exploration of humanity's prospects on a complex, protean and ultimately finite world. It is not a question of whether the planet is sustainable; the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable. Only new resources, new priorities, new policies, and most of all, new knowledge can reverse the damage that humanity is doing to our home and ourselves. A sustainable human future, Rhodes concludes in this eloquent, sobering but ultimately optimistic book, will require a sense of responsible stewardship for we are not owners of this planet; we are tenants. Surveying the systems, large and small, that govern Earth's processes and influence its changes, Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home.

Air, Water, Earth, Fire

Angelo Peccerillo, 2021-10-03. The book describes the structure, composition, and evolution of the Earth, the main geological processes occurring on it, and how some crucial environmental matters that are amply debated in the media, e.g., pollution, greenhouse effect, can be fully understood by placing them in the holistic context of the system Earth as a whole. It provides basic information on a series of key geological issues, from the structure and composition of the Earth to the large-scale processes that characterize our planet, such as rock alteration and sedimentation, magmatism, geomagnetism, seismicity, plate tectonics, cyclical migration of chemical elements through various Earth reservoirs, Geochemical Cycles, and evolution of the planet from Hadean to present. It intends to reach a wide readership which is interested in our planet and wish to have a general and comprehensive view of its origin, evolution, and activity. Potential readership includes undergraduate and advanced undergraduate students in Geology and other scientific disciplines, and any moderately to well-educated people interested in the surrounding world and eager to gain a basic knowledge of the Earth and to reach an integrated view of how our planet is working.

The Story of Earth & Life

Terence McCarthy, Bruce Rubidge, 2013-07-10. Geologically speaking, southern Africa is without equal a treasure house of valuable minerals with a geological history dating back some 3,600 million years. In addition, the evolution of plants and animals, especially mammals and dinosaurs, is well preserved in the region, which also probably has the best record of the origin of modern man. This book provides a fascinating insight into that remarkable history, how southern Africa and to some extent the world came to be the way it is, how its mineral deposits formed, its life evolved, and its landscape was shaped. Along the way, readers will be enthralled by accounts of the Big Bang that marked the beginning of time and matter, by drifting and colliding continents, folding and fracturing of rocks, meteors colliding with the Earth, the time when the Earth froze over, volcanic eruptions, and the start of life. Anyone interested in the landscape and ecosystems in which we live will be intrigued to discover how our natural landmarks were formed, from the deserts of Namibia to the mountains of the Western Cape or Mpumalanga. Why is South Africa so rich in minerals? How did glacial deposits come to be found in the Karoo? Why did dinosaurs become extinct? How did mammals develop from reptiles?

How closely related are we to the apes The answers to many such questions are found in this lavishly illustrated volume The authors also suggest how we can learn from the past in order to anticipate the future for instance to be able to predict earthquakes deal with volcanic eruptions and meet the challenges of global climate change
