Rotmans, 2005-08-09 A collection of papers prepared for the European Forum on Integrated Environmental Assessment s EFIEA Policy Workshop on Scaling Issues in Integrated Assessment held from 12-19 July 2000      [Encyclopedia of Geomorphology](#) Andrew Goudie, 2013-04-15 Geomorphology the discipline which analyzes the history and nature of the earth's surface deals with the landforms produced by erosion weathering deposition transport and tectonic processes In recent decades there have been major developments in the discipline and these are reflected in this major Encyclopedia the first such reference work in the field to be published for thirty five years Encyclopedia of Geomorphology has been produced in association with the International Association of Geomorphologists IAG and has a truly global perspective The entries have been written by an international editorial team of contributors drawn from over thirty countries who are all among the leading experts in the discipline In two lavishly illustrated volumes Encyclopedia contains nearly 700 alphabetically organized entries to provide a comprehensive guide both to specific landforms and to the major types of geomorphological processes that create them The Encyclopedia also demonstrates the major developments that have taken place in recent years in our knowledge of tectonic and climatic changes and in the use of new techniques such as modelling remote sensing and process measurement Older concepts however are not forgotten and provide an historical perspective on the development of ideas Both accessible and authoritative Encyclopedia of Geomorphology is destined to become the definitive resource for students researchers and applied practitioners in the field of geomorphology and the cognate disciplines of geography earth science sedimentology and environmental science      *Landscape Evolution* Jonathan D. Phillips, 2021-04-30 *Landscape Evolution* Landforms Ecosystems and Soils asks us to think holistically to look for the interactions between the Earth's component surface systems to consider how universal laws and historical and geographical contingency work together and to ponder the implications of nonlinear dynamics in landscapes ecosystems and soils Development evolution landforms topography soils ecosystems and hydrological systems are inextricably intertwined While empirical studies increasingly incorporate these interactions theories and conceptual frameworks addressing landforms soils and ecosystems are pursued largely independently This is partly due to different academic disciplines traditions and lexicons involved and partly due to the disparate time scales sometimes encountered *Landscape Evolution* explicitly synthesizes and integrates these theories and threads of inquiry arguing that all are guided by a general principle of efficiency selection A key theme is that evolutionary trends are probabilistic emergent outcomes of efficiency selection rather than purported goal functions This interdisciplinary reference will be useful for academic and research scientists across the Earth sciences Serves as a primary theoretical resource on landscape evolution Earth surface system development and environmental responses to climate and land use change Incorporates key ideas on geomorphic soil hydrologic and ecosystem evolution and responses in
