Double Date Florence Ryerson, 1951 **Calendars and Years** John M. Steele, 2007-10-08 Dates form the backbone of written history But where do these dates come from Many different calendars were used in the ancient world Some of these calendars were based upon observations or calculations of regular astronomical phenomena such as the first sighting of the new moon crescent that defined the beginning of the month in many calendars while others incorporated schematic simplifications of these phenomena such as the 360 day year used in early Mesopotamian administrative practices in order to simplify accounting procedures Historians frequently use handbooks and tables for converting dates in ancient calendars into the familiar BC AD calendar that we use today But very few historians understand how these tables have come about or what assumptions have been made in their construction The seven papers in this volume provide an answer to the question what do we know about the operation of calendars in the ancient world and just as importantly how do we know it Topics covered include the ancient and modern history of the Egyptian 365 day calendar astronomical and administrative calendars in ancient Mesopotamia and the development of astronomical calendars in ancient Greece This book will be of interest to ancient historians historians of science astronomers who use early astronomical records and anyone with an interest in calendars and their development *Civil Calendar and Lunar Calendar in Ancient Egypt* Leo Depuydt, 1997 This investigation is concerned with ancient Egyptian calendars Its specific focus is one of the oldest problems of the study of these calendars the so called problem of the month names This work s main purpose is to suggest an explanation for the Brugsch phenomenon The Brugsch phenomenon is one of the two main aspects of the problem of the month names The other is the Gardiner phenomenon No new theory is presented for the Gardiner phenomenon As a problem the Brugsch phenomenon is slightly older than the Gardiner Phenomenon It has occupied center stage in the study of ancient Egyptian calendars since the early days of this endeavor In 1870 Heinrich Brugsch the great pioneer in this subject wrote about the phenomenon Here we encounter all at once the most curious contradiction Just recently Rolf Krauss has described the contradiction as still unsolved The Brugsch phenomenon concerns the indisputable fact that the last or twelfth month of the Egyptian civil year can be named as if it were the first Two month names are involved The first is wp rnpt Its meaning opener of the year refers to a beginning The second month name is mswt r birth of Re in hieroglyphic Egyptian Mesore in Aramaic Greek and Coptic Both can otherwise also refer to New Year s Day the quintessential calendrical beginning [Current Research in Egyptology 2023](#) L.
