Torpedo Bombers, 1900-1950 Jean-Denis Lepage,2020-01-27 The torpedo bomber was a very short lived weapon system operational for scarcely half a century from just prior WWI to the 1960s Yet during its brief existence it transformed naval warfare extending the ship killing range of ships and coastal defences to hundreds of miles The Royal Navy and Fleet Air Arm led the way recording the first sinking of a ship by aerial torpedo in August 1915 but all major navies eagerly developed their own torpedo bomber forces The torpedo bomber reached its zenith in WWII particularly from 1940 42 with notable successes at the Battle of Taranto the sinking of the Bismarck and Pearl Harbor It was the weapon of choice for both the US and Japanese in the big Pacific battles such as Midway In the latter stages of the war increasingly effective anti aircraft fire and interceptor aircraft started to render it obsolete a process completed post war by long range anti ship missiles Jean Denis Lepage traces the development of torpedo bombers worldwide describing their tactics operational history and the aircraft themselves including such well loved types as the Swordfish Beaufighter and Avenger Over 300 aircraft are beautifully illustrated

The A-1 Skyraider in Vietnam Wayne Mutza,2003 Through its remarkable service during the war in Southeast Asia the Skyraider became legendary It served with distinction in the hands of U S Navy U S Air Force and South Vietnamese Air Force pilots who took

the war to the enemy often at low altitude and in the face of devastating anti-aircraft fire. And it suffered heavy losses. The Skyraider's versatility and the mettle of its pilots were unmatched. This book takes not only a look at an old airplane but at the warriors who flew and maintained the machine they called the Spad. This volume captures the essence of combat in the Spad and explains the broad range of Spad operations. The text, which is rich with the narratives of Spad pilots and ground crew, is complemented by over 300 original photographs, seventy emblems, and detailed listings of every Skyraider that flew in the war and the colorful units to which they were assigned. This fascinating volume is a must for aviation enthusiasts, history buffs, and modelers alike.

Jane's All the World's Aircraft Frederick Thomas Jane, 1963

Aircraft of the Royal Navy David Hobbs, 2024-11-30. This is a comprehensive study of every aircraft type ordered for the Royal Navy since 1908. It includes fixed and rotary wing aircraft, rigid and non-rigid airships, unmanned aircraft, and pilotless target aircraft, together with many designs that were ordered but not built, so that the importance placed on them by the Naval Staff or their potential technological impact on carrier design and operations can be explained. Every type, even unsuccessful single prototypes, is described. The majority are illustrated by photographs, many of which come from the author's own collection, and the fifty most significant aircraft have detailed drawings. The Australian and Canadian Fleet Air Arms operated RN aircraft types for many years after their formation, and these are included together with other types they have operated subsequently to give a more complete overview. The book describes over 400 different types of aircraft built by over 100 different manufacturers to offer the most detailed coverage of RN aircraft ever produced. Research for the book took over forty years, and reference material included Admiralty Archives and an array of material in the public domain, including manufacturers' data, individual aircraft pilot's notes, and a wealth of published sources. David Hobbs is uniquely well-placed to write this book, having served in the RN for thirty-three years and retired with the rank of Commander. He flew both fixed and rotary wing aircraft, and his log book contains 2300 flying hours with 807 day and night deck landings. He served in seven British aircraft carriers and spent four years within RN Director General Aircraft Department, where he was closely involved with Sea Harrier carrier trials and introduced new visual landing aids for night recoveries, and liaised with the USN on carrier operating techniques. This is his eleventh book for Seaforth Publishing.
