**ANOVA for the Behavioral Sciences Researcher** Rudolf N. Cardinal, Michael R.F. Aitken, 2013-04-15 This new book provides a theoretical and practical guide to analysis of variance ANOVA for those who have not had a formal course in this technique but need to use this analysis as part of their research From their experience in teaching this material and applying it to research problems the authors have created a summary of the statistical theory underlying ANOVA together with important issues guidance practical methods references and hints about using statistical software These have been organized so that the student can learn the logic of the analytical techniques but also use the book as a reference guide to experimental designs realizing along the way what pitfalls are likely to be encountered [Social Cognition](#) Susan Fiske, 2018-01-29 In the World Library of Psychologists series international experts present career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings and their major practical theoretical contributions Susan T Fiske has an international reputation as an eminent scholar and pioneer in the field of social cognition Throughout her distinguished career she has investigated how people make sense of other people using shortcuts that reveal prejudices and stereotypes Her research in particular addresses how these biases are encouraged or discouraged by social relationships such as cooperation competition and power In 2013 she was elected to the National Academy of Sciences and in 2011 to the British Academy She has also won several scientific honours including the Guggenheim Fellowship the APA Distinguished Scientific Contributions Award the APS William James Fellow Award as well as the European Federation of Psychologists Associations Wundt James Award and honorary degrees in Belgium the Netherlands Spain and Switzerland This collection of selected publications illustrates the foundations of modern social cognition research and its development in the late twentieth and early twenty first century In a specially written introductory chapter Fiske traces the key advances in social cognition throughout her career and so this book will be invaluable reading for students and researchers in social cognition person perception and intergroup bias **Bulletin** ,1927 *Semantics in Adaptive and Personalized Services* Manolis Wallace, Ioannis E. Anagnostopoulos, Phivos Mylonas, Mária Bieliková, 2010-03-10 *Semantics in Adaptive and Personalised Services* initially strikes one as a specific and perhaps narrow domain Yet a closer examination of the term reveals much more On one hand there is the issue of semantics Nowadays this most often refers to the use of OWL RDF or some other XML based ontology description language in order to represent the entities of problem Still semantics may also very well refer to the consideration of the meanings and concepts rather than arithmetic measures regardless of the representation used On the other hand there is the issue of adaptation i e automated re configuration based on some context This could be the network and device context the application context or the user context we refer to the latter case as personalization From a different perspective there is the issue of the point of view from which to examine the topic There is the point of view of tools referring to the algorithms and software tools one can use the point of view of the methods referring to the abstract

methodologies and best practices one can follow as well as the point of view of applications referring to successful and pioneering case studies that lead the way in research and innovation Or at least so we thought Based on the above reasoning the editors identified key researchers and practitioners in each of the aforementioned categories and invited them to contribute a corresponding work to this book However as the authors contributions started to arrive the editors also started to realize that although these categories participate in each chapter to different degrees none of them can ever be totally obsolete from them Moreover it seems that theory and methods are inherent in the development of tools and applications and inversely the application is also inherent in the motivation and presentation of tools and methods
