

## **BROADCASTING EXAM QUESTIONS.**

### **1. What is the difference between analog and digital broadcasting?**

Analog broadcasting and digital broadcasting are two different methods of transmitting television and radio signals.

- Analog broadcasting is the older technology, which uses analog signals to transmit television and radio signals. Analog signals are continuous waves that are used to transmit information such as sound and video. The main disadvantage of analog broadcasting is that the signal quality can degrade over long distances, and the signal can be affected by interference such as static and ghosts.
- Digital broadcasting, on the other hand, uses digital signals to transmit television and radio signals. Digital signals are made up of a series of 1s and 0s, which are used to transmit information. Digital broadcasting provides a clearer and more reliable signal, as the signal is less susceptible to interference. Additionally, digital broadcasting allows for the transmission of multiple channels within the same bandwidth as a single analog channel.
- Another difference is that Analog broadcasting takes up more bandwidth than digital broadcasting, so more channels can be broadcasted digitally in the same frequency band than analog, which means that digital broadcasting is more efficient and less susceptible to interference.
- Finally, analog broadcasting is being phased out in many countries, as it's being replaced by digital broadcasting which allows for higher-quality pictures and sound, as well as additional channels and interactive services such as video on demand and digital video recording.

### **2. How do you set up and operate a television or radio studio?**

Setting up and operating a television or radio studio involves several steps, including:

- Designing the studio layout: This includes determining the placement of equipment such as cameras, lighting, audio equipment, and set elements.
