Corporate Criminal Liability and Prevention Richard S. Gruner, 2004 The book instructs corporate counsel on how to adopt forward looking compliance policies that can prevent criminal liability and how to mitigate the severity of penalties when they are unavoidable

Collective Knowledge Patrick Figge, 2018-05-18 Collective knowledge and the associated concepts of collectively learning remembering and inventing are increasingly important in today's economy and society Completing knowledge work alone is more and more difficult for individuals Based on novel data sets which identify founders as inventors on patents and survey data collected from senior management the author investigates questions about knowledge processing What determines whether dispersed specialist knowledge can be located and used to complete tasks or to create new knowledge How are social interactions organized and to what extent do individuals such as founders influence the course of action taken by the system as a whole

Applications of Learning Classifier Systems Larry Bull, 2012-08-13 The field called Learning Classifier Systems is populated with romantics Why shouldn't it be possible for computer programs to adapt learn and develop while interacting with their environments In particular why not systems that like organic populations contain competing perhaps cooperating entities evolving together John Holland was one of the earliest scientists with this vision at a time when so called artificial intelligence was in its infancy and mainly concerned with preprogrammed systems that didn't learn that like organisms had sensors took Instead Holland envisaged systems actions and had rich self generated internal structure and processing In so doing he foresaw and his work prefigured such present day domains as reinforcement learning and embedded agents that are now displacing the older standard

One focus was what Holland called classifier systems sets of competing rule like classifiers each a hypothesis as to how best to react to some aspect of the environment or to another rule The system embracing such a rule population would explore its available actions and responses rewarding and rating the active rules accordingly Then good classifiers would be selected and reproduced mutated and even crossed a la Darwin and genetics steadily and reliably increasing the system's ability to cope

Sartre and Psychoanalysis Betty Cannon, 1991 Betty Cannon is the first to explore the implications of Sartrean philosophy for the Freudian psychoanalytic tradition Drawing upon Sartre's work as well as her own experiences as a practicing therapist she shows that Sartre was a fellow traveler who appreciated Freud's psychoanalytic achievements but rebelled against the determinism of his metatheory The mind Sartre argued cannot be reduced to a collection of drives and structures nor is it enslaved to its past as Freud's work suggested Sartre advocated an existentialist psychoanalysis based on human freedom and the self's ability to reshape its own meaning and value Through the Sartrean approach Cannon offers a resolution to the crisis in psychoanalytic metatheory created by the current emphasis on relational needs By comparing Sartre with Freud and influential post-Freudians like Melanie Klein Otto Kernber Margaret Mahler D W Winnicott Heinz

Kohut Harry Stack Sullivan and Jacques Lacan she demonstrates why the Sartrean model transcends the limitations of traditional Freudian metatheory In the process she adds a new dimension to our understanding of Sartre and his place in twentieth century philosophy
