Note: When the key is turned on, the gauge needle on the coolant temperature, engine oil pressure, air pressure, battery, and fuel gauges (items 1, 2, 7, 23, & 24 in Figure 1–33) will go to the 12 o'clock position and an indicator light within each gauge will flash as a means of testing the gauge. The needle will return to the normal operating position and the light should go out after a short period of time. If the gauge is not monitoring its respective function, the indicator light will illuminate and the needle will sweep back and forth then move and remain at the 10 o'clock position.
