the immune system and nervous system It deals with among other things the physiological functioning of the neuroimmune system in states of both health and disease malfunctions of the neuroimmune system in disorders autoimmune diseases hypersensitivities immune deficiency the physical chemical and physiological characteristics of the components of the neuroimmune system in vitro in situ and in vivo Despite the brain s status as an immune privileged site an extensive bi directional communication takes place between the nervous and the immune system in both health and disease Immune cells and neuroimmune molecules such as cytokines chemokines and growth factors modulate brain function through multiple signalling pathways throughout the lifespan Immunological physiological and psychological stressors engage cytokines and other immune molecules as mediators of interactions with neuroendocrine neuropeptide and neurotransmitter systems For example brain cytokine levels increase following stress exposure while treatments designed to alleviate stress reverse this effect This book presents leading research from around the globe *Advances in Neuroimmunology* Cedric S. Frederickson, Hugh C. Hendrie, Joseph N. Hingtgen, Morris H. Aprison, 2012-12-06 Our understanding of the functioning of the brain has grown rapidly over the last decade or two So has our recognition of the possible role of brain dysfunction in diseases considered earlier to be of peripheral or somatic origin This culminates naturally in a focus on the nature of the influence of the brain on other systems such as the autonomic neuroendocrine and immune systems And we must come full circle and question the nature of the influence of these systems on the function of the brain Thus we gain a picture of a complex regulatory interaction fine tuned in normal circumstances to provide each system with necessary information about the status of the other systems and the basis to respond appropriately to changes in each other This volume provides the proceedings of the first of a series of international symposia intended to review the state of the art understanding and frontier exploration of the above described interregulatory phenomena with some emphasis on the relevance of this information to the etiology and treatment of disease The purpose of this first symposium was to lay the groundwork for this continuing endeavor To accomplish such a goal required bringing together diverse multidisciplinary professionals eg neurobiologists immunologists psychiatrists cardiologists and students amongst others Clinical Neuroimmunology Peter O.
