## **Autonomous Brain:**

**The Autonomous Brain** Peter M. Milner, 1999-07-01 The behaviorist credo that animals are devices for translating sensory input into appropriate responses dies hard The thesis of this pathbreaking book is that the brain is innately constructed to initiate behaviors likely to promote the survival of the species and to sensitize sensory systems to stimuli required for those behaviors Animals attend innately to vital stimuli reinforcers and the more advanced animals learn to attend to related stimuli as well Thus the centrifugal attentional components of sensory systems are as important for learned behavior as the more conventional paths It is hypothesized that the basal ganglia are an important source of response plans and attentional signals This reversal of traditional learning theory along with the rapid expansion of knowledge about the brain especially that acquired by improved techniques for recording neural activity in behaving animals and people makes it possible to re examine some long standing psychological problems One such problem is how the intention to perform an act selects sensory input from relevant objects and ensures that it alone is delivered to the motor system to control the intended response This is an aspect of what is sometimes known as the binding problem how the different features of an observed object are integrated into a unified percept Another problem that has never been satisfactorily addressed is how the brain stores information concerning temporal order a requirement for the production of most learned responses including pronouncing and writing words A fundamental process the association between brain activities representing external events is surprisingly poorly understood at the neural level Most concepts have multiple associations but the concept is not unduly corrupted by them and usually only a single appropriate association is aroused at a time Furthermore any arbitrary pair of concepts can be instantly associated apparently requiring an impossibly high degree of neural interconnection The author suggests a substitute for the reverberating closed neuronal loop as an explanation for the engram active memory trace or working memory which may go some way to resolving these difficulties Shedding new light on enduring questions The Autonomous Brain will be welcomed by a broad audience of behavioral and brain scientists

neuroscience computer science or philosophy who are interested in cultural neuroscience Postphenomenological Methodologies Jesper Aagaard, Jan Kyrre Berg Friis, Cathrine Hasse, Jessica Sorenson, Oliver Tafdrup, 2018-08-15 This edited volume is the first publication to tackle the issue of researching human technology relations from a methodological postphenomenological perspective While the traditional phenomenology of the 20th century with figures like Husserl Heidegger and Merleau Ponty provided valuable insights into the formal structures of essence being and embodiment etc their mode of philosophizing mostly involved abstract pure thinking Although rooted in this tradition the postphenomenological approach to the study of human technology relations emphasizes the empirical turn and interdisciplinary work in the field of philosophy and reaches out to other disciplines like anthropology education media studies and science and technology studies STS The contributors discuss what it means for the field of postphenomenology to be empirically based and what kind of methodology is required in order for researchers to go out and study human technology relations in this perspective In many disciplines methodology refers to the analytical approach taken e g the analytical concepts you employ to make an analysis in postphenomenology these might include concepts such as multistability variation or mediation In a discipline like anthropology it also refers to reflections over the methods researchers use to approach an empirical field Methods can include interviews of different kinds participant observations surveys and auto ethnography Furthermore methodology can include ethical issues tied to doing research in an empirical field These practical aspects are not separate from but rather connected to theoretical approaches This book ties together the methods ethics and theories of postphenomenology in a groundbreaking volume on methodology With postphenomenological studies of education digital media biohacking health robotics and skateboarding as points of reference the authors of this volume in twelve chapters provide new perspectives on what a comprehensive postphenomenological research methodology must consist of
