Autonomous Agents:

Autonomous Agents Alfred R. Mele, 1995-08-03 This book addresses two related topics self control and individual autonomy In approaching these issues Mele develops a conception of an ideally self controlled person and argues that even such a person can fall short of personal autonomy He then examines what needs to be added to such a person to yield an autonomous agent and develops two overlapping answers one for compatibilist believers in human autonomy and one for incompatibilists While remaining neutral between those who hold that autonomy is compatible with determinism and those who deny this Mele shows that belief that there are autonomous agents is better grounded than belief that there are not

Immovable Laws, Irresistible Rights Christine Pierce,2000 Same sex partnerships Pregnancy through in vitro fertilization Ending one s own life in dignity All are deemed inherently wrong by the standards of natural law ethics but for many people they represent legitimate life choices that are morally right Now a leading feminist critic of the natural law tradition explores the ongoing confrontation between natural law and moral rights to argue that rights constitute a more solid grounding for ethics in human affairs and for feminist thought In this volume Christine Pierce s important essays including the celebrated Natural Law Language and Women expand reflect and refine this central controversy Reaching back to Aristotle and Aquinas and drawing on modern papal encyclicals and Supreme Court cases Pierce demonstrates that the natural law tradition with its doctrine of a supposed hierarchy of natural purpose has served to mystify women s nature and thereby justify restricting women to a predetermined social stratum Addressing issues that concern not only feminism but legal theory as well she defends her views on equality and universalization against a growing postmodern critique and presents rights theory as an alternative to an ethics of responsibility based on Aristotelian notions of friendship and trust Through tightly constructed arguments presented in engaging prose Pierce conveys her deep knowledge of legal philosophy and her passion for rights as she takes on such issues as AIDS gay marriage animal liberation and feminist separatism She combats the prevailing view of Plato as sexist and explores Sartre s views of holes and slime She also examines the work of contemporary authors in ecology biology sociobiology and religion to reveal their reliance on nature for ethical conclusions and she criticizes recent efforts to root a feminist natural law in Thomism With natural law concepts now in fashion with many conservatives and even some Supreme Court justices Pierce s essays offer a necessary perspective on where current legal and ethical thinking is headed *Immovable Laws Irresistible Rights* is invigorating reading for all scholars students and interested readers who seek a better understanding of these arguments and the issues affected by them **Monthly Summary of the League of Nations**

League of Nations,1929 **Real-Time Search for Learning Autonomous Agents** Toru Ishida,1997-06-30 Autonomous agents or multiagent systems are computational systems in which several computational agents interact or work together to perform some set of tasks These systems may involve computational agents having common goals or distinct goals Real Time Search for Learning Autonomous Agents focuses on extending real time search algorithms for autonomous agents and for a multiagent world Although real time search provides an attractive framework for resource bounded problem solving the behavior of the problem solver is not rational enough for autonomous agents The problem solver always keeps the record of its moves and the problem solver cannot utilize and improve previous experiments Other problems are that although the algorithms interleave planning and execution they cannot be directly applied to a multiagent world The problem solver

cannot adapt to the dynamically changing goals and the problem solver cannot cooperatively solve problems with other problem solvers This book deals with all these issues Real Time Search for Learning Autonomous Agents serves as an excellent resource for researchers and engineers interested in both practical references and some theoretical basis for agent multiagent systems The book can also be used as a text for advanced courses on the subject **World Trade** ,1930 Vols 5 7 9 11 include Official report of the proceedings of the 7th 10th congress of the International chamber of commerce 1933 1937 1939 ANZIIS ... ,1996
