## **Auxiliation An Enquiry Into The Nature Of Grammaticalization:**

**Auxiliation** Tania Kuteva, 2004 Auxiliation describes the process by which auxiliary verbs such as do may must will and have develop from lexical verbs meaning exist possess hold etc The sequence of verb followed by complement turns into the grammatical structure of marker followed by main verb This transformation which involves morphosyntactic semantic and phonological changes can be seen operating in the same direction across many if not all languages There is no accepted theory to explain it Tania Kuteva presents a cross linguistic study of the phenomenon She seeks a to explore the cognitive forces underlying auxiliation b to shed light on how auxiliation relates to discourse and to pragmatic considerations and c to show the relation between the conceptual semantic and discourse pragmatic factors at work in the process Combining recent grammaticalization theory with insights from the psychology of language use the author also offers a new perspective on how grammaticalization occurs in everyday linguistic communication The book makes significant contributions to an explanatory theory of auxiliation to the study of language change and to the understanding of linguistic communication

**Grammaticalisation Paths of Have in English** Andrzej M. Łęcki, 2010 This book explores the diachronic emergence of the verb have in English in its various grammatical uses The development of grammatical functions of have is analysed from pragmatic semantic morphosyntactic and phonetic angles Apart from the well known and formerly studied cases of the rise of perfect and obligative have the author describes the developments of the had better structure as well as causative have which have not received much scholarly attention thus far He shows that the first examples of the fully grammaticalised constructions with have generally appear earlier than it is commonly believed He also offers possible motivations behind the growth of obligative and causative have This book proves that the changes leading to the rise of new grammatical constructions occur in a specific order pragmatic semantic changes precede morphosyntactic changes and phonetic reductions are the last to take place

**Manual of Grammatical Interfaces in Romance** Susann Fischer, Christoph Gabriel, 2016-09-12 Different components of grammar interact in non trivial ways It has been under debate what the actual range of interaction is and how we can most appropriately represent this in grammatical theory The volume provides a general overview of various topics in the linguistics of Romance languages by examining them through the interaction of grammatical components and functions as a state of the art report but at the same time as a manual of Romance languages

**Diachronic Construction Grammar** Jóhanna Barðdal, Elena Smirnova, Lotte Sommerer, Spike Gildea, 2015-07-15 Construction Grammar as a framework offers a new perspective on traditional historical questions in diachronic linguistics and language change how do new constructions arise how should competition in diachronic variation be accounted for how do constructions fall into disuse and how do constructions change in general formally and or semantically and with what implications for the language system as a whole This volume offers a broad introduction to the confluence of Construction Grammar and historical syntax and also

detailed case studies of various instances of syntactic change modeled within Construction Grammar The volume demonstrates that Construction Grammar as a theory is particularly well suited for modeling historical changes in morphosyntax and it also documents challenging new phenomena that require a theoretical account within any competing framework of syntactic change
