Computing Science and Statistics, 1992 *Proceedings of the Statistical Computing Section* American Statistical Association. Statistical Computing Section, 1995 Artificial Intelligence Richard E. Neapolitan, Xia Jiang, 2018-03-12 The first edition of this popular textbook *Contemporary Artificial Intelligence* provided an accessible and student friendly introduction to AI This fully revised and expanded update *Artificial Intelligence With an Introduction to Machine Learning* Second Edition retains the same accessibility and problem solving approach while providing new material and methods The book is divided into five sections that focus on the most useful techniques that have emerged from AI The first section of the book covers logic based methods while the second section focuses on probability based methods Emergent intelligence is featured in the third section and explores evolutionary computation and methods based on swarm intelligence The newest section comes next and provides a detailed overview of neural networks and deep learning The final section of the book focuses on natural language understanding Suitable for undergraduate and beginning graduate students this class tested textbook provides students and other readers with key AI methods and algorithms for solving challenging problems involving systems that behave intelligently in specialized domains such as medical and software diagnostics financial decision making speech and text recognition genetic analysis and more *Advanced Data Mining and Applications* Gao Cong, Wen-Chih Peng, Wei Emma Zhang, Chengliang Li, Aixin Sun, 2017-10-30 This book constitutes the refereed proceedings of the 13th International Conference on Advanced Data Mining and Applications ADMA 2017 held in Singapore in November 2017 The 20 full and 38 short papers presented in this volume were carefully reviewed and selected from 118 submissions The papers were organized in topical sections named database and distributed machine learning recommender system social network and social media machine learning classification and clustering methods behavior modeling and user profiling bioinformatics and medical data analysis spatio temporal data natural language processing and text mining data mining applications applications and demos Advances in Non-Archimedean Analysis and Applications W. A. Zúñiga-Galindo, Bourama Toni, 2021-12-02 This book provides a broad interdisciplinary overview of non Archimedean analysis and its applications Featuring new techniques developed by leading experts in the field it highlights the relevance and depth of this important area of mathematics in particular its expanding reach into the physical biological social and computational sciences as well as engineering and technology In the last forty years the connections between non Archimedean mathematics and disciplines such as physics biology economics and engineering have received considerable attention Ultrametric spaces appear naturally in models where hierarchy plays a central role a phenomenon known as ultrametricity In the 80s the idea of using ultrametric spaces to describe the states of complex systems with a natural hierarchical structure emerged in the works of Fraunfelder Parisi Stein and others A central paradigm in the physics of certain complex systems for instance proteins asserts that the dynamics of such a system can be modeled as a random walk on the energy landscape of the system To construct

mathematical models the energy landscape is approximated by an ultrametric space a finite rooted tree and then the dynamics of the system is modeled as a random walk on the leaves of a finite tree In the same decade Volovich proposed using ultrametric spaces in physical models dealing with very short distances This conjecture has led to a large body of research in quantum field theory and string theory In economics the non Archimedean utility theory uses probability measures with values in ordered non Archimedean fields Ultrametric spaces are also vital in classification and clustering techniques Currently researchers are actively investigating the following areas p adic dynamical systems p adic techniques in cryptography p adic reaction diffusion equations and biological models p adic models in geophysics stochastic processes in ultrametric spaces applications of ultrametric spaces in data processing and more This contributed volume gathers the latest theoretical developments as well as state of the art applications of non Archimedean analysis It covers non Archimedean and non commutative geometry renormalization p adic quantum field theory and p adic quantum mechanics as well as p adic string theory and p adic dynamics Further topics include ultrametric bioinformation cryptography and bioinformatics in p adic settings non Archimedean spacetime gravity and cosmology p adic methods in spin glasses and non Archimedean analysis of mental spaces By doing so it highlights new avenues of research in the mathematical sciences biosciences and computational sciences

Performance Modeling for Computer Architects

C. M. Krishna, 1995-10-14 As computers become more complex the number and complexity of the tasks facing the computer architect have increased Computer performance often depends in complex way on the design parameters and intuition that must be supplemented by performance studies to enhance design productivity This book introduces computer architects to computer system performance models and shows how they are relatively simple inexpensive to implement and sufficiently accurate for most purposes It discusses the development of performance models based on queuing theory and probability The text also shows how they are used to provide quick approximate calculations to indicate basic performance tradeoffs and narrow the range of parameters to consider when determining system configurations It illustrates how performance models can demonstrate how a memory system is to be configured what the cache structure should be and what incremental changes in cache size can have on the miss rate A particularly deep knowledge of probability theory or any other mathematical field to understand the papers in this volume is not required

Handbook of Sharing Confidential Data Jörg Drechsler, Daniel Kifer, Jerome Reiter, Aleksandra Slavković, 2024-10-09 Statistical agencies research organizations companies and other data stewards that seek to share data with the public face a challenging dilemma They need to protect the privacy and confidentiality of data subjects and their attributes while providing data products that are useful for their intended purposes In an age when information on data subjects is available from a wide range of data sources as are the computational resources to obtain that information this challenge is increasingly difficult The Handbook of Sharing Confidential Data helps data stewards understand how tools from the data confidentiality literature specifically synthetic data formal privacy and secure

computation can be used to manage trade offs in disclosure risk and data usefulness Key features Provides overviews of the potential and the limitations of synthetic data differential privacy and secure computation Offers an accessible review of methods for implementing differential privacy both from methodological and practical perspectives Presents perspectives from both computer science and statistical science for addressing data confidentiality and privacy Describes genuine applications of synthetic data formal privacy and secure computation to help practitioners implement these approaches The handbook is accessible to both researchers and practitioners who work with confidential data It requires familiarity with basic concepts from probability and data analysis
