Computing With T Node Parallel Architecture:

Computing with T.Node Parallel Architecture D. Heidrich, J.C. Grossetie, 2012-12-06 Parallel processing is seen today as the means to improve the power of computing facilities by breaking the Von Neumann bottleneck of conventional sequential computer architectures. By defining appropriate parallel computation models, definite advantages can be obtained. Parallel processing is the center of the research in Europe in the field of Information Processing Systems, so the CEC has funded the ESPRIT Supemode project to develop a low cost high performance multiprocessor machine. The result of this project is a modular reconfigurable architecture based on NMOS transputers T Node. This machine can be considered as a research industrial and commercial success. The CEC has decided to continue to encourage manufacturers as well as research and end users of transputers by funding other projects in this field. This book presents course papers of the Eurocourse given at the Joint Research Centre in ISPRA Italy from the 4th to 8th of November 1991. First we present an overview of various trends in the design of parallel architectures and specially of the T Node with its software development environments, new distributed system aspects and also new hardware extensions based on the NMOS T9000 processor. In a second part we review some real case applications in the field of image synthesis, image processing, signal processing, terrain modeling, particle physics simulation and also enhanced parallel and distributed numerical methods on T Node.

J. Bækgaard Pedersen, K. Chalmers, J.F. Broenink, 2019-03-26 Concurrent and parallel systems are intrinsic to the technology which underpins almost every aspect of our lives today. This book presents the combined post proceedings for two important conferences on concurrent and parallel systems: Communicating Process Architectures 2017 held in Sliema, Malta in August 2017 and Communicating Process Architectures 2018 held in Dresden, Germany in August 2018. CPA 2017: Fifteen papers were accepted for presentation and publication; they cover topics including mathematical theory, programming languages, design and support tools, verification and multicore infrastructure and applications ranging from supercomputing to embedded A. A workshop on domain specific concurrency skeletons and the abstracts of eight fringe presentations reporting on new ideas, work in progress or interesting thoughts associated with concurrency are also included in these proceedings. CPA 2018: Eighteen papers were accepted for presentation and publication; they cover topics including mathematical theory, design and programming language and support tools, verification, multicore run time infrastructure and applications at all levels from supercomputing to embedded A. A workshop on translating CSP based languages to common programming languages and the abstracts of four fringe presentations on work in progress, new ideas as well as demonstrations and concerns that certain common practices in concurrency are harmful are also included in these

proceedings The book will be of interest to all those whose work involves concurrent and parallel systems **High Performance Computing & Networking for Science**, 1989 **High performance computing & networking for science**.
