Conception Of Value

Hannah Robie Sewall

Conception Of Value:

The Conception of Value H. Paul Grice, 2001 The works of Paul Grice collected in this volume present his metaphysical defence of value and represent a modern attempt to provide a metaphysical foundation for value Value judgements are viewed as objective value is part of the world we live in but nonetheless is constructed by us We inherit or seem to inherit the Aristotelian world in which objects and creatures are characterized in terms of what they are supposed to do We are thereby enabled to evaluate by reference to function and finality This much is not surprising The most striking part of Grice's position however is his contention that the legitimacy of such evaluations rests ultimately on an argument for absolute value The collection includes Grice's three previously unpublished Carus Lectures on the conception of value a section of his Reply to Richards previously published in Grandy and Warner eds *Philosophical Grounds of Rationality* Oxford 1986 and *Method in Philosophical Psychology* Presidential Address delivered to the Annual Meeting of the American Philosophical Association 1975

Introduction to Value Theory Nicholas Rescher, 1969

The Concepts of Value L. Aschenbrenner, 2012-12-06

The task of presenting for explicit view the store of appraisive terms our language affords has been undertaken in the conviction that it will be of interest not only to ethics and other philosophical studies but also to various areas of social science and linguistics I have principally sought to do justice to the complexities of this vocabulary the uses to which it is put and the capacities its use reflects I have given little thought to whether the inquiry was philosophical and whether it was being conducted in a philosophical manner Foremost in my thoughts were the tasks that appeared to need doing among them these explicit attention was to be given to the vocabulary by means of which we say we commend judge appraise or evaluate subjects and subject matters in our experience it was to be segregated from other language at least for the purpose of study the types of appraisive resources that are at hand in a language such as English were to be classified in some convincing and not too artificial manner and an empirical standpoint was to be developed for a better view of appraisal evaluation and judging within the framework of other ways we have of responding to our surroundings such as appetite and emotion on one side and factual registering and theorizing about states of affairs on the other Such an inquiry has never been undertaken in quite this manner before

Real Estate Valuation Theory Many M. Mooya, 2016-03-17 This monograph critically reviews and updates real estate valuation theory which is based on neoclassical economics in light of developments in heterodox economic theory Building on a comprehensive historical account of the evolution of value theory the book uses new institutional economics theory and critical realism as lenses through which problems in standard valuation theory and practice are expatiated and as the foundation for an alternative theory The new theory is employed to explain major problems in real estate valuation that are beyond the capability of the standard theory such as price bubbles in real estate markets anchoring bias client influence and valuation under uncertain market conditions
