Nonlinear Dynamics and Statistics Alistair I. Mees, 2012-12-06 All models are lies The Earth orbits the sun in an ellipse with the sun at one focus is false but accurate enough for almost all purposes This book describes the current state of the art of telling useful lies about time varying systems in the real world Specifically it is about trying to understand that is tell useful lies about dynamical systems directly from observations either because they are too complex to model in the conventional way or because they are simply ill understood Because it overlaps with conventional time series analysis building models of nonlinear dynamical systems directly from data has been seen by some observers as a somewhat ill informed attempt to reinvent time series analysis The truth is distinctly less trivial It is surely impossible except in a few special cases to recreate Newton's astonishing feat of writing a short equation that is an excellent description of real world phenomena Real systems are connected to the rest of the world they are noisy non stationary and have high dimensional dynamics even when the dynamics contains lower dimensional attractors there is almost never a coordinate system available in which these attractors have a conventionally simple description
