Concrete Abstractions:

Concrete Abstractions Max Hailperin, Barbara Kaiser, Karl Knight, 1999 CONCRETE ABSTRACTIONS offers students a hands on abstraction based experience of thinking like a computer scientist This text covers the basics of programming and data structures and gives first time computer science students the opportunity to not only write programs but to prove theorems and analyze algorithms as well Students learn a variety of programming styles including functional programming assembly language programming and object oriented programming OOP While most of the book uses the Scheme programming language Java is introduced at the end as a second example of an OOP system and to demonstrate concepts of concurrent programming The Routledge Handbook of Henri Lefebvre, The City and Urban Society Michael E. Leary-Owhin, John P. McCarthy, 2019-11-21 The Routledge Handbook of Henri Lefebvre The City and Urban Society is the first edited book to focus on Lefebvre s urban theories and ideas from a global perspective making use of recent theoretical and empirical developments with contributions from eminent as well as emergent global scholars The book provides international comparison of Lefebvrian research and theoretical conjecture and aims to engage with and critique Lefebvre s ideas in the context of contemporary urban social and environmental upheavals to use Lefebvre s spatial triad as a research tool as well as a point of departure for the adoption of ideas such as differential space to reassess Lefebvre s ideas in relation to nature and global environmental sustainability and to highlight how a Lefebvrian approach might assist in mobilising resistance to the excesses of globalised neoliberal urbanism The volume draws inspiration from Lefebvre s key texts The Production of Space Critique of Everyday Life and The Urban Revolution and includes a comprehensive introduction and concluding chapter by the editors The conclusions highlight implications in relation to increasing spatial inequalities increasing diversity of needs including those of migrants more authoritarian approaches and asymmetries of access to urban space Above all the book illustrates the continuing relevance of Lefebvre s ideas for contemporary urban issues and shows via global case studies how resistance to spatial domination by powerful interests might be achieved The Handbook helps the reader navigate the complex terrain of spatial research inspired by Lefebvre In particular the Handbook focuses on the series of struggles globally for the right to the city and the collision of debates around the urban age cityism and planetary urbanisation It will be a guide for graduate and advanced undergraduate teaching and a key reference for academics in the fields of Human Geography Sociology Political Science Applied Philosophy Planning Urban Theory and Urban Studies Practitioners and activists in the field will also find the book of relevance *Philosophy and Ideology* Z.A. Jordan, 2012-12-06 The purpose of this study is to describe the development of philosophy in Poland since the end of the Second World War and the development of Marxist Leninist philosophy which owing to international political events has assumed an important role in the intellectual life of contemporary Poland This task could not have been accomplished without relating post war developments to those of the inter war period Consequently the period studied covers the years 1918 1958 Yet another

extension was necessary Marxism Leninism regards sociology as a part of philosophy Moreover Marxism Leninism often resorts to sociology to support or justify some of its philosophical views Finally its criticism of bourgeois philosophy is often concerned with social philosophy and socio logical theories which supposedly are implicit or explicit in bourgeois philosophy For this reason it was desirable to consider in this study some theoretical and methodological problems of the social sciences They are taken into account when they illuminate philosophical controversies or the evolution of Marxist Leninist philosophy Marxism Leninism is not only a new line of development but also a new point of departure in Polish philosophy It provides a striking contrast with the established philosophical tradition which originated roughly at the time when G E Moore and Bertrand Russell initiated the analytical trend in English philosophy The contrast can be epitomised by the contradistinction of philosophy and ideology chosen as the title of this study

Concrete Abstractions Wolfgang Schreiner, 2023-04-11 This book demonstrates how to formally model various mathematical domains including algorithms operating in these domains in a way that makes them amenable to a fully automatic analysis by computer software The presented domains are typically

investigated in discrete mathematics logic algebra and computer science they are modeled in a formal language based on first order logic which is sufficiently rich to express the core entities in whose correctness we are interested mathematical theorems and algorithmic specifications This formal language is the language of RISCAL a mathematical model checker by which the validity of all formulas and the correctness of all algorithms can be automatically decided The RISCAL software is freely available all formal contents presented in the book are given in the form of specification files by which the reader may interact with the software while studying the corresponding book material

Measurement and Interpretation in Accounting G A Swanson,James Miller,1989-10-25 For many years the accounting profession has attempted to construct a conceptual framework that logically ties together its many ideas and procedures As this systems view of accounting emerges it is important argue Swanson and Miller to make the distinction between opinion or personal interpretation and empirical evidence In this pioneering book they develop a coherent theory of accounting measurement based on living systems theory LST and thus provide a fundamental framework for classifying the various accounting ideas and procedures into those that concern measurements of concrete economic processes and interpretations of those measurements Writing for advanced students of accounting and finance the authors explain the distinctions among concrete abstracted and conceptual systems discuss the concept of money in terms of concrete processes and survey the connections between twenty LST defined subsystems and accounting information systems Contrary to most modern accounting theory they assert that the monetary scale is a ratio level measurement scale fully analogous to other measurement scales used by science They reject the idea that the units of the scale are variable and show that this general perception arises from the fallacy of confusing the objects being measured with the units of the measurement scale Using this scale accounting s unique contribution to information processing is enabling managers and other social deciders to view the diverse matter energy forms of a complex organization as a coherent whole on the attribute specific exchange value Finally Swanson and Miller analyze generally accepted accounting principles highlighting areas in which the distinction between interpretation and empirical evidence is blurred in practice They present an extended critique of the usefulness of such principles and propose new alternatives based on living systems theory that will improve both our understanding of accounting methods and measurements and the quality of accounting reporting Numerous tables and figures enhance the presentation
