Concurrency and Nets Klaus Voss, Hartmann J. Genrich, Grzegorz Rozenberg, 2012-12-06 Concurrency and Nets is a special volume in the series Advances in Petri Nets Prepared as a tribute to Carl Adam Petri on the occasion of his 60th birthday it is devoted to an outstanding personality and his pioneering and fruitful scientific work Part I 70 pages of over 600 presents the congratulatory addresses and invited talks that were given at an Anniversary Colloquium The contributions of this part honor Carl Adam Petri and his work from many different perspectives Part II is a collection of invited papers discussing various aspects of the theme Concurrency and Nets These papers are contributed partly by researchers that were or are still associated with the Petri Institute at GMD and partly by researchers whose scientific work deals with Net Theory or related system models The topics range from basic theoretical aspects to application oriented methods **Lectures on Concurrency and Petri Nets** Jörg Desel, Wolfgang Reisig, Grzegorz Rozenberg, 2004-07-09 This tutorial volume originates from the 4th Advanced Course on Petri Nets ACPN 2003 held in Eichsttt Germany in September 2003 In addition to lectures given at ACPN 2003 additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area This book will be useful as both a reference for those working in the area as well as a study book for the reader who is interested in an up to date overview of research and development in concurrent and distributed systems of course readers specifically interested in theoretical or applicational aspects of Petri nets will appreciate the book as well

Application and Theory of Petri Nets and Concurrency Susanna Donatelli, Stefan Haar, 2019-06-11 This book constitutes the proceedings of the 40th International Conference on Application and Theory of Petri Nets and Concurrency PETRI NETS 2019 held in Aachen Germany in June 2018 Petri Nets 2019 is co located with the 19th International Conference on Application of Concurrency to System Design ACSD 2019 The 23 regular and 3 invited papers presented together in this volume were carefully reviewed and selected from 41 submissions The focus of the conference is on following topics Models Tools Synthesis Semantics Concurrent Processes Algorithmic Aspects Parametrics and Combinatorics and Models with Extensions *Transactions on Petri Nets and Other Models of Concurrency V* Susanna Donatelli, Jetty Kleijn, 2012-03-22 These Transactions publish archival papers in the broad area of Petri nets and other models of concurrency ranging from theoretical work to tool support and industrial applications ToPNoC issues are published as LNCS volumes and hence are widely distributed and indexed This Journal has its own Editorial Board which selects papers based on a rigorous two stage refereeing process ToPNoC contains Revised versions of a selection of the best papers from workshops and tutorials at the annual Petri net conferences Special sections issues within particular subareas similar to those published in the Advances in Petri Nets series Other papers invited for publication in ToPNoC Papers submitted directly to ToPNoC by their authors The fifth volume of ToPNoC contains revised versions of selected papers from workshops and tutorials held in conjunction with the 31st International Conference on Application and Theory of Petri Nets and Other Models of Concurrency as well as a

contributed paper selected through the regular submission track of ToPNoC The 12 papers cover a diverse range of topics including model checking and system verification synthesis foundational work on specific classes of Petri nets and innovative applications of Petri nets and other models of concurrency Thus this volume gives a good view of ongoing concurrent systems and Petri nets research

Advances in Petri Nets, 1986: Petri nets, applications and relationships to other models of concurrency Wilfried Brauer, Wolfgang Reisig, Grzegorz Rozenberg, 1987 Concurrency and Hardware Design Jordi Cortadella, Alex Yakovlev, Grzegorz Rozenberg, 2003-07-01 As CMOS semiconductor technology strides towards billions of transistors on a single die new problems arise on the way They are concerned with the minishing fabrication process features which affect for example the gate to wire delay ratio They manifest themselves in greater variations of size and operating parameters of devices which put the overall reliability of systems at risk And most of all they have tremendous impact on design productivity where the costs of utilizing the growing silicon real estate rocket to billions of dollars that have to be spent on design verification and testing All such problems call for new design approaches and models for digital systems Furthermore new developments in non CMOS technologies such as single electron transistors rapid single quantum devices quantum dot cells molecular devices etc add extra demand for new research in system design methodologies What kind of models and design methodologies will be required to build systems in all these new technologies Answering this question even for each particular type of new technology generation is not easy especially because sometimes it is not even clear what kind of elementary devices are feasible there This problem is of an interdisciplinary nature It requires an bridges between different scientific communities The bridges must be built very quickly and be maximally flexible to accommodate changes taking place in a logarithmic timescale

CONCUR 2005 - Concurrency Theory Martín Abadi, 2005-08-08 This book constitutes the refereed proceedings of the 16th International Conference on Concurrency Theory CONCUR 2005 held in San Francisco CA USA in August 2005 The 38 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 100 submissions Among the topics covered are concurrency related aspects of models of computation Petri nets model checking game semantics process algebras real time systems verification techniques secrecy and authenticity refinement distributed programming constraint logic programming typing systems and algorithms case studies tools and environment for programming and verification

Nets, Terms and Formulas E. -R. Olderog, 2005-08-22 The author presents a theory whereby nets terms and formulas represent concurrent process at three levels of abstractions Petri nets are used to describe all

details of the operational machine behavior of processes Algebraic process terms such as Calculus of Communicating Systems CCS or Communicating Sequential Processes CSP two of the main models for parallel programming are used to describe the architecture of processes i e how they can be composed from subprocesses Logical formulas of a first order trace logic are used to describe the safety and liveness aspects of the communication behavior of processes as required by their users The main emphasis and technical contribution of this theory are transformations for a top down design of concurrent processes starting with formulas and proceeding through terms to nets

D'Argenio,Hernan Melgratti,2013-07-23 This book constitutes the thoroughly refereed proceedings of the 24th International Conference on Concurrency Theory CONCUR 2013 held in Buenos Aires Argentina August 27 30 2013 The 34 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 115 submissions The papers are organized in topics such as process semantics and modal transition systems VAS and pushdown systems Pi calculus and interaction nets linearizability and verification of concurrent programs verification of infinite models model measure and reversibility stochastic models message based interaction processes principles of automatic verification and games and control synthesis

Concurrent Object-Oriented Programming and Petri Nets Gul A. Agha,2001-04-18 Concurrency and distribution have become the dominant paradigm and concern in computer science Despite the fact that much of the early research in object oriented programming focused on sequential systems objects are a natural unit of distribution and concurrency as elucidated early on by research on the Actor model Thus models and theories of concurrency the oldest one being Petri nets and their relation to objects are an attractive topic of study This book presents state of the art results on Petri nets and concurrent object oriented programming in a coherent and competent way The 24 thoroughly reviewed and revised papers are organized in three sections The first consists of long papers each presenting a detailed approach to integrating Petri nets and object orientation Section II includes shorter papers with emphasis on concrete examples to demonstrate the approach Finally section III is devoted to papers which significantly build on the Actor model of computation
