Condensed Matter Theories:

Condensed Matter Field Theory Alexander Altland, Ben D. Simons, 2010-03-11 Modern experimental developments in condensed matter and ultracold atom physics present formidable challenges to theorists This book provides a pedagogical introduction to quantum field theory in many particle physics emphasizing the applicability of the formalism to concrete problems This second edition contains two new chapters developing path integral approaches to classical and quantum nonequilibrium phenomena Other chapters cover a range of topics from the introduction of many body techniques and functional integration to renormalization group methods the theory of response functions and topology Conceptual aspects and formal methodology are emphasized but the discussion focuses on practical experimental applications drawn largely from condensed matter physics and neighboring fields Extended and challenging problems with fully worked solutions provide a bridge between formal manipulations and research oriented thinking Aimed at elevating graduate students to a level where they can engage in independent research this book complements graduate level courses on many particle theory

Field Theories of Condensed Matter Physics Eduardo Fradkin, 2013-02-28 Presenting the physics of the most challenging problems in condensed matter using the conceptual framework of quantum field theory this book is of great interest to physicists in condensed matter and high energy and string theorists as well as mathematicians Revised and updated this second edition features new chapters on the renormalization group the Luttinger liquid gauge theory topological fluids topological insulators and quantum entanglement The book begins with the basic concepts and tools developing them gradually to bring readers to the issues currently faced at the frontiers of research such as topological phases of matter quantum and classical critical phenomena quantum Hall effects and superconductors Other topics covered include one dimensional strongly correlated systems quantum ordered and disordered phases topological structures in condensed matter and in field theory and fractional statistics

Condensed Matter Theories Heidi Reinholz, 2007 This series on condensed matter theories provides a forum for advanced theoretical research in quantum many body theory The contributions are highly interdisciplinary emphasizing common concerns among theorists who apply many particle methods in such diverse areas as solid state low temperature statistical nuclear particle and biological physics as well as in quantum field theory quantum information and the theory of complex systems Each individual contribution is preceded by an extended introduction to the topic treated Useful details not normally presented in journal articles can be found in this volume

Condensed Matter Theories Jouko Arponen, R.F. Bishop, Matti Manninen, 2012-12-06 This book is the third volume in an approximately annual series which comprises the proceedings of the International Workshops on Condensed Matter Theories The first of

these meetings took place in 1977 in Sao Paulo Brazil and successive workshops have been held in Trieste Italy 1978 Buenos Aires Argentina 1979 Caracas Venezuela 1980 Mexico City Mexico 1981 St Louis USA 1982 Altenberg Federal Republic of Germany 1983 Granada Spain 1984 San Francisco USA 1985 and Argonne USA 1986 The present volume contains the proceedings of the Eleventh Workshop which took place in Oulu Finland during the period 27 July 1 August 1987 The original motivation and the historical evolution of the series of Workshops have been amply described in the preface to the first volume in the present series An important objective throughout has been to work against the ever present trend for physics to fragment into increasingly narrow fields of specialisation between which communication is difficult The Workshops have traditionally sought to emphasise the unity of physics By bringing together scientists working in many different areas of condensed matter theory for the dual purpose of fostering collaborations between them and promoting the exchange of ideas between various disciplines a common language has been exposed and developed The Editor of the first volume in the series

F B Condensed Matter Theories S. Fantoni, S. Rosati, 2012-12-06 The XIV International Workshop on Condensed Matter Theories has been held at the Elba International Physics Center EIPC Marciana Marina Isola d Elba Italy from 18 23 June 1990 The Workshop started in 1977 in Sao Paulo Brazil as the 1st Pan American Workshop on Condensed Matter Theories with the purpose of bringing together scientists from the Western countries working in many different topics of Condensed Matter Theories to facilitate exchanges of ideas and technologies from different areas as well as collaborations among the scientists The next five Workshops were held at Trieste Italy 1978 in Buenos Aires Argentina 1979 in Caracas Venezuela 1980 in Mexico City Mexico 1981 and in St Louis Missouri U S A 1982 Given the international dimension reached by the Workshop it was decided to extend it into an International Workshop which was held for the first time in Altenberg Germany 1983 The next editions took place in Granada Spain 1984 San Francisco California U S A 1985 Argonne Illinois U S A 1986 Oulu Finland 1987 Taxco Mexico 1988 and Campos do Jordao Brasil 1989 Many scientists have contributed to the development of the various editions of the Workshop However a particular mention has to be made to Profs Manuel de Llano and Angel Plastino who initially proposed the Workshop and carried it forward and to Prof J W Clark whose efforts have been of immense help to its recent developments

Condensed Matter Theories Valdir C.
