

OUR PAST

Burning fossil fuels such as coal, gas and oil have dramatically increased the amount of carbon dioxide in the Earth's atmosphere and temperatures are rising. As the world's need for energy will grow, the dependence on non-renewable energy sources must decline.

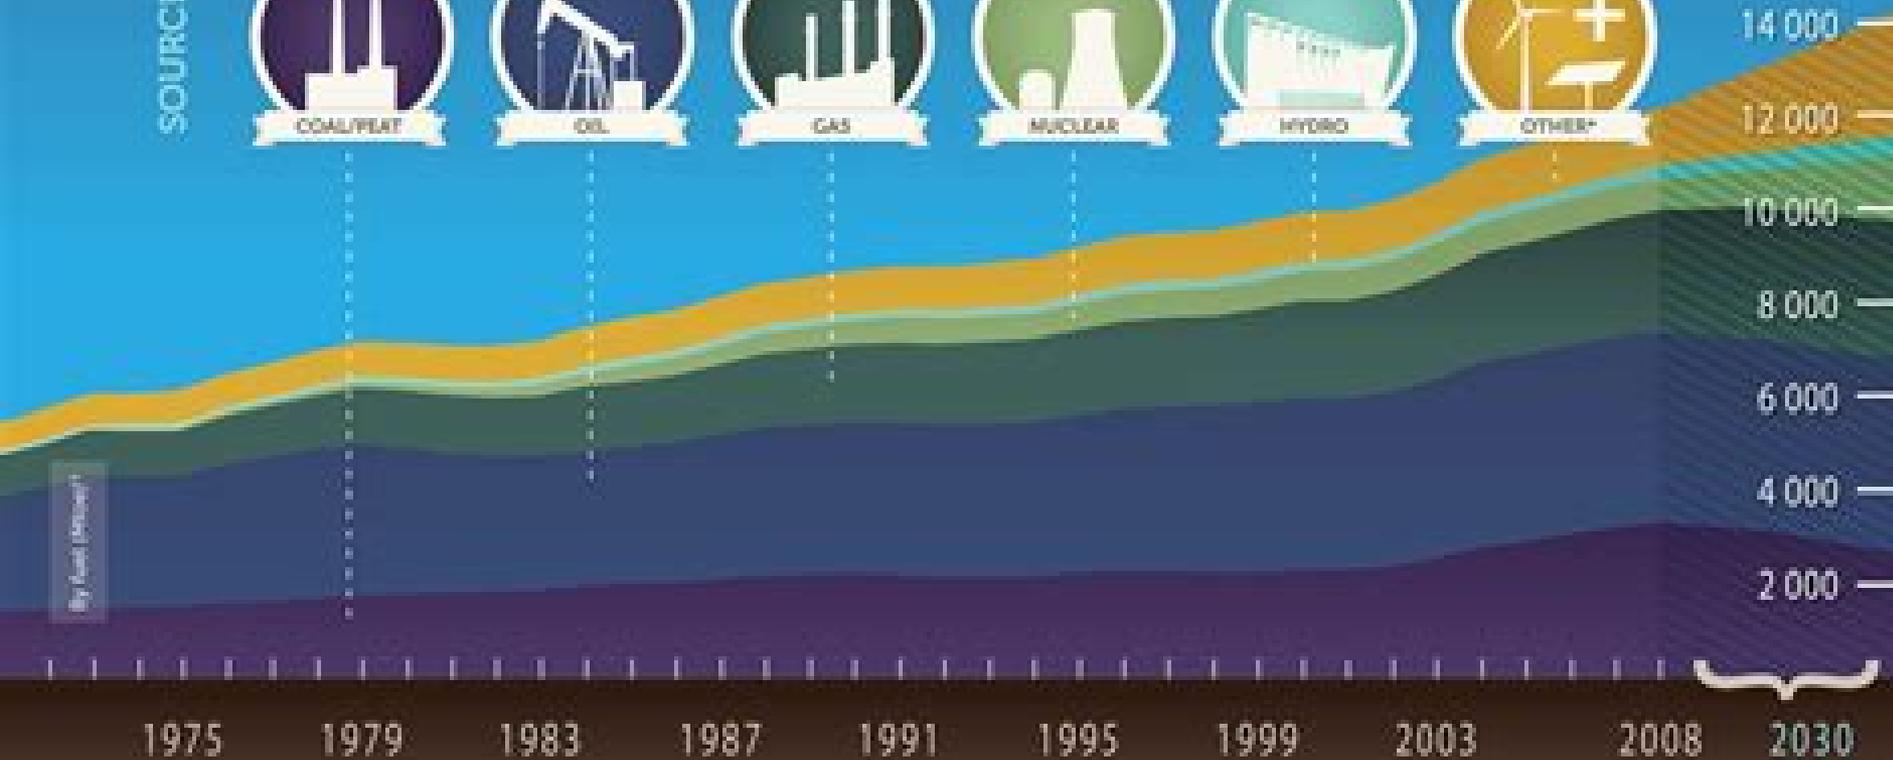

World ENERGY SUPPLY

1971 - 2030

OUR FUTURE

Clean energy (any source of energy that causes little or no harm to the environment) needs to be the main source of energy in the future. If policies that are currently under consideration take effect, we can begin to increase the supply of clean energy by 2030.
