Axiomatic Stable Homotopy Theory:

Axiomatic Stable Homotopy Theory Mark Hovey, John Harold Palmieri, Neil P. Strickland, 1997 We define and investigate a class of categories with formal properties similar to those of the homotopy category of spectra This class includes suitable versions of the derived category of modules over a commutative ring or of comodules over a commutative Hopf algebra and is closed under Bousfield localization We study various notions of smallness questions about representability of co homology functors and various kinds of localization We prove theorems analogous to those of Hopkins and Smith about detection of nilpotence and classification of thick subcategories We define the class of Noetherian stable homotopy categories and investigate their special properties Finally we prove that a number of categories occurring in nature including those mentioned above satisfy our axioms

Axiomatic Stable Homotopy Theory Paperback Mark Hovey, 2014-09-11 This work gives an axiomatic presentation of stable homotopy theory It starts with axioms defining a stable homotopy category using these axioms one can make various constructions cellular towers Bousfield localization and Brown representability to name a few Much of the book is devoted to these constructions and to the study of the global structure of stable homotopy categories

Axiomatic, Enriched and Motivic Homotopy Theory John Greenlees, 2012-12-06 The NATO Advanced Study Institute Axiomatic enriched and motivic homotopy theory took place at the Isaac Newton Institute of Mathematical Sciences Cambridge England during 9-20 September 2002 The Directors were J P C Greenlees and I Zhukov the other organizers were P G Goerss F Morel J F Jardine and V P Snaith The title describes the content well and both the event and the contents of the present volume reflect recent remarkable successes in model categories structured ring spectra and homotopy theory of algebraic geometry The ASI took the form of a series of 15 minicourses and a few extra lectures and was designed to provide background and to bring the participants up to date with developments The present volume is based on a number of the lectures given during the workshop The ASI was the opening workshop of the four month programme New Contexts for Stable Homotopy Theory which explored several themes in greater depth I am grateful to the Isaac Newton Institute for providing such an ideal venue the NATO Science Committee for their funding and to all the speakers at the conference whether or not they were able to contribute to the present volume All contributions were refereed and I thank the authors and referees for their efforts to fit in with the tight schedule Finally I would like to thank my coorganizers and all the staff at the Institute for making the ASI run so smoothly J P C GREENLEES

Cohomological Methods in Homotopy Theory Jaume Aguade, Carles Broto, Carles Casacuberta, 2012-12-06 This book contains a collection of articles summarizing the state of knowledge in a large portion of modern homotopy theory A call for articles was made on the occasion of an emphasis semester organized by the Centre de Recerca Matemàtica in Bellaterra Barcelona in 1998 The main topics treated in the book include abstract features of stable and unstable homotopy homotopical localizations p compact groups H spaces classifying spaces for proper actions cohomology of discrete groups K theory and other generalized cohomology theories configuration

Homotopy Theory L. Gaunce Jr. Lewis, J. Peter May, Mark Steinberger, 2006-11-14 This book is a foundational piece of work in stable homotopy theory and in the theory of transformation groups It may be roughly divided into two parts The first part deals with foundations of equivariant stable homotopy theory A workable category of CW spectra is developed The foundations are such that an action of a compact Lie group is considered throughout and spectra allow desuspension by arbitrary representations But even if the reader forgets about group actions he will find many details of the theory worked out for the first time More subtle constructions like smash products function spectra change of group isomorphisms fixed point and orbit spectra are treated While it is impossible to survey properly the material which is covered in the book it does boast these general features i a thorough and reliable presentation of the foundations of the theory ii a large number of basic results principal applications and fundamental techniques presented for the first time in a coherent theory unifying numerous treatments of special cases in the literature **Mathematical Reviews** ,2005 **Fundamenta Mathematicae** ,2006

Elmendorf,1997 This book introduces a new point set level approach to stable homotopy theory that has already had many applications and promises to have a lasting impact on the subject Given the sphere spectrum S the authors construct an associative commutative and unital smash product in a complete and cocomplete category of S modules whose derived category is equivalent to the classical stable homotopy category This construction allows for a simple and algebraically manageable definition of S algebras and commutative S algebras in terms of associative or associative and commutative products $R \wedge SR \rightarrow R$ These notions are essentially equivalent to the earlier notions of A infinity and E infinity ring spectra and the older notions feed naturally into the new framework to provide plentiful examples There is an equally simple definition of R modules in terms of maps $R \wedge SM \rightarrow M$ When R is commutative the category of R modules also has a **Israel Journal of Mathematics** Mo'atsah ha-le'umit le-mehkar ule-fituah (Israel),2008

Spectra and the Steenrod Algebra H.R. Margolis,1983-02-12 I have intended this book to be more than just the sum of its chapters and the introduction is in part an attempt to spell out what the more is Algebraic topology is the study of topological problems by algebraic means More precisely this has come to be framed as the study of topological categories by means of functors to algebraic categories Beyond the basic definitions and structure the focus is often on particular problems for example Adams use of K theory to solve the vector fields on spheres problem On the other hand there are contributions of a

more global nature yielding insight into the overall structure of some topological category for example Quillen's work on rational homotopy type This book is intended primarily as a contribution of this latter sort So while there will be a variety of particular examples and computations and although the structure being developed has significant application to many specific problems some of which are considered here the major thrust of the text is toward understanding the global structure and linkage of the topological and algebraic categories considered the stable homotopy category and the category of modules over the Steenrod algebra *Forthcoming Books* Rose Arny,1997 **Journal of Integral Equations** ,1983
