When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object's speed and direction will remain the same. This is called Newton's first law of motion.</p> <p>Another important concept is acceleration. Acceleration is the rate at which an object's velocity changes. This means that if an object's velocity is increasing or decreasing, it is accelerating. This is called Newton's second law of motion.</p> <p>Friction is a force that opposes motion between two surfaces in contact. It acts in the opposite direction of the object's motion. This means that if an object is moving to the right, friction will act to the left. This is why a ball rolling on a flat surface will eventually stop.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is not a type of contact force? <ul style="list-style-type: none"> a.
