Breaking The Surface:

Breaking the Surface Greg Louganis, Eric Marcus, 2006-03-01 This is a new edition of Greg Louganis's 1995 New York Times bestselling autobiography and Literary Guild Selection. It is the unflinchingly honest first person account of a man breaking free of a lifetime of silence and isolation. Born to a young Samoan father and Northern European mother and adopted at nine months, Greg began diving at age nine and at sixteen won a silver medal at the 1976 Montreal Olympics. But despite his astonishing athletic skill, Greg struggled with late-detected dyslexia, prejudice toward his dark skin coloring, and anguish over his homosexuality, which he felt compelled to hide. Being in the spotlight intensified his difficulties with relationships and substance abuse. However, Louganis went on to win double gold medals at the 1984 and 1988 Olympics. His triumph at the 1988 Olympics came several months after he tested positive for HIV. This is the haunting, searingly candid story of the world's greatest diver. This new edition includes a new foreword.

Sea Surface Sound '94 - Proceedings Of The Iii International Meeting On Natural Physical Processes Related To Sea Surface Sound Michael J Buckingham, J R Potter, 1996-01-11 Understanding and constructively using natural sound in the ocean has become of prime importance with the shift of emphasis to protecting the environment and exercising responsible global resource management, which has followed the end of the Cold War. Especially now that we realize that marine mammals and other inhabitants of the oceans are threatened by our acoustic pollution of their environment, the use of natural sound as a non-intrusive remote sensing probe has become particularly germane. This was the first meeting on the subject since the fall of Soviet Western barriers, and the proceedings include significant work from premier researchers in the former Soviet Union. It was also the first meeting which specifically addressed the new and exciting idea of using natural sound in applications for monitoring the marine environment. The proceedings include a number of papers on various aspects of this topic. Further new work on the basic physics of sound production and propagation is also included. This volume includes leading edge work from the foremost researchers in the field, including Bill Carey, Lawrence Crum, Nikolai Dubrovskii, David Farmer, Brian Kerman, Bill Kuperman, Michael Longuet-Higgins, Hank Medwin, Ken Melville, A Prosperetti, and many others.
