

SUMMARY OF TRENDS: ESTABLISHMENTS, EMPLOYMENT, AND WAGES

The number of advanced electronics and related industry establishments in Ohio grew from 2,503 to 4,526 during the 1988-1996 period. Three-fourths of this growth occurred in computer and data processing services (SIC 737), with almost all of the remaining growth in telephone communications (SIC 481). The remaining industry groups may have shown significant percentage changes, but these are relatively small in numeric magnitude when compared with the aforementioned groups.

Overall, employment in advanced electronics and related industries increased from just under 106,000 in 1988 to over 119,000 in 1996. However, the net gain of 13,000 jobs masks divergent trends between the industry groups. Employment in computer and data processing and cable TV grew phenomenally by a combined 20,000. In contrast, job losses in computer and office equipment (SIC 357), measuring and controlling devices (SIC 382), and telephone communications (SIC 481) exceeded 1,000 in each. (The reason for pronounced job losses in the last group is that telephone communications (SIC 4813) eliminated more jobs than radio-telephone communications (SIC 4812) created.) All other industry groups showed employment gains or losses of less than 1,000 each.

Generally, workers in Ohio earn less than their industry group counterparts in the rest of the country. The only exceptions are employees in household audio and video (SIC 365) and search and navigation equipment (SIC 386). Overall, real wages (adjusted for inflation) showed little change during the 1988-1996 period.
