Compiling Functional Languages:

   Compiling Functional Languages Antoni Diller,1988-09-08 Describes different ways of implementing functional programming languages which bear a strong family resemblance to one another and which all have their origins in the work of Turner on combinator based graph reducers First chapters cover translation of Lipskit into combinatory logic and evaluation of the resulting object code by graph reduction Later chapters follow a natural progression refining and improving the efficiency of this implementation   <u>Programming Language Implementation and Logic Programming</u> Jaan Penjam,1994-08-24 This volume constitutes the proceedings of the 6th International Symposium on Programming Language Implementation and Logic Programming PLILP 94 held in Madrid Spain in September 1994 The volume contains 27 full research papers selected from 67 submissions as well as abstracts of full versions of 3 invited talks by renowned researchers and abstracts of 11 system demonstrations and poster presentations Among the topics covered are parallelism and concurrency implementation techniques partial evaluation synthesis and language issues constraint programming meta programming and program transformation functional logic programming and program analysis and abstract interpretation

   Modern Compiler Implementation in C Andrew W. Appel,2004-07-08 This new expanded textbook describes all phases of a modern compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as functional and object oriented languages that are missing from most books In addition more advanced chapters are now included so that it can be used as the basis for a two semester or graduate course The most accepted and successful techniques are described in a concise way rather than as an exhaustive catalog of every possible variant Detailed descriptions of the interfaces between modules of a compiler are illustrated with actual C header files The first part of the book Fundamentals of Compilation is suitable for a one semester first course in compiler design The second part Advanced Topics which includes the advanced chapters covers the compilation of object oriented and functional languages garbage collection loop optimizations SSA form loop scheduling and optimization for cache memory hierarchies   **Modern Compiler Implementation in ML** Andrew W. Appel,1998 Describes all phases of a modern compiler including techniques in code generation and register allocation for imperative functional and object oriented languages   **Parallel Functional Languages and Compilers** Bolesław Szymański,1991

   Compiler Construction Uwe Kastens,Peter Pfahler,1992-09-23 The International Workshop on Compiler Construction provides a forum for thepresentation and discussion of recent developments in the area of compiler construction Its scope ranges from compilation methods and tools to implementation techniques for specific requirements of languages and target architectures This volume contains the papers selected for presentation at the 4th International Workshop on Compiler Construction CC 92 held in Paderborn Germany October 5 7 1992 The papers present recent developments on such topics as

structural and semantic analysis code generation and optimization and compilation for parallel architectures and for functional logical and application languages   *Compiling Functional Programming Languages Using Class Hierarchies* Xiaohong Wang,1991   *A Survey of Functional Programming Language Principles* ,1986   **Programming Languages Implementation and Logic Programming** ,1992   *Functional and Logic Programming* ,2001   **Lazy Functional Languages** Geoffrey Burn,1991 This book explores a subclass known as lazy functional languages beginning with thetheoretical issues and continuing through abstract interpretation and offering improved techniquesfor implementation   **Programming Language Implementation and Logic Programming** ,1994   **Functional Programming** Anthony J. Field,Peter G. Harrison,1988   Programming Language Implementation and Logic Programming Maurice Bruynooghe,Martin Wirsing,1992 This volume contains the papers accepted for presentation at the Fourth International Symposium on Programming Language Implementation and Logic Programming PLILP 92 held in Leuven Belgium August 26 28 1992 Theaim of the symposium was to explore new declarative concepts methods and techniques relevant for implementation of all kinds of programming languages whether algorithmic or declarative The symposium gathered researchers from the fields of algorithmic programming languages as well as logic functional and object oriented programming The topics discussed in the volume include Declarative implementation techniques Implementation of declarative concepts and modules Compiler specification and construction Program transformation Programming environments for declarative languages Amalgamation of logic programming with algorithmic functional or object oriented techniques Executable specification PUBLISHER S WEBSITE   **Proceedings of the ACM SIGPLAN ... Workshop on Functional and Declarative Programming in Education** ,2005   *Compiling Lenient Languages for Parallel Asynchronous Execution* Klaus Erik Schauser,1994   *Conference Record of FPCA '95* ,1995   Functional Programming Languages and Computer Architecture Gilles Kahn,1987-08-27 This volume contains the proceedings of the Third Conference on Functional Programming Languages and Computer Architecture held in Portland Oregon September 14 16 1987 This conference was a successor to two highly successful conferences on the same topics held at Wentworth New Hampshire in October 1981 and in Nancy in September 1985 Papers were solicited on all aspects of functional languages and particularly implementation techniques for functional programming languages and computer architectures to support the efficient execution of functional programs The contributions collected in this volume show that many issues regarding the implementation of Functional Programming Languages are now far better understood   **Arrays, Functional Languages, and Parallel Systems** Lenore Mullin,1991-10-31 During a meeting in Toronto last winter Mike Jenkins Bob Bernecky and I were discussing how the two existing theories on arrays influenced or were in fluenced by programming languages and systems More s Army Theory was the basis for NIAL and APL2 and Mullin s A Mathematics of A rmys MOA is being used as an algebra of arrays in functional and A calculus based pro gramming languages MOA was influenced by Iverson s initial and

extended algebra the foundations for APL and J respectively We discussed that there is a lot of interest in the Computer Science and Engineering communities concerning formal methods for languages that could support massively parallel operations in scientific computing a back to roots interest for both Mike and myself Languages for this domain can no longer be informally developed since it is necessary to map languages easily to many multiprocessor architectures Software systems intended for parallel computation require a formal basis so that modifications can be done with relative ease while ensuring integrity in design List based lan guages are profiting from theoretical foundations such as the Bird Meertens formalism Their theory has been successfully used to describe list based parallel algorithms across many classes of architectures
