When multiple forces act on an object, they can combine to cause an object to accelerate, decelerate, or change direction. Understanding how forces and acceleration are related provides a foundation for understanding motion and how it changes over time.</p> <p>Newton's second law states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force on an object increases, the acceleration will also increase, and if the mass of the object increases, the acceleration will decrease.</p> <p>Newton's first law states that an object at rest will stay at rest, and an object in motion will stay in motion with a constant velocity unless acted upon by a net external force. This means that if the net force on an object is zero, the object will continue to move at a constant velocity.</p> </div> <p>Read the passage carefully before answering the questions that follow.</p> <ol style="list-style-type: none"> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Tension</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Tension</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Tension</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Tension</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
