## **Cooperating Heterogeneous Systems:**

*Cooperating Heterogeneous Systems* David G. Schwartz, 2012-12-06 *Cooperating Heterogeneous Systems* provides an in depth introduction to the issues and techniques surrounding the integration and control of diverse and independent software components Organizations increasingly rely upon diverse computer systems to perform a variety of knowledge based tasks This presents technical issues of interoperability and integration as well as philosophical issues of how cooperation and interaction between computational entities is to be realized Cooperating systems are systems that work together towards a common end The concepts of cooperation must be realized in technically sound system architectures having a uniform meta layer between knowledge sources and the rest of the system The layer consists of a family of interpreters one for each knowledge source and meta knowledge A system architecture to integrate and control diverse knowledge sources is presented The architecture is based on the meta level properties of the logic programming language Prolog An implementation of the architecture is described a Framework for Logic Programming Systems with Distributed Execution FLiPSiDE Knowledge based systems play an important role in any up to date arsenal of decision support tools The tremendous growth of computer communications infrastructure has made distributed computing a viable option and often a necessity in geographically distributed organizations It has become clear that to take knowledge based systems to their next useful level it is necessary to get independent knowledge based systems to work together much as we put together ad hoc work groups in our organizations to tackle complex problems The book is for scientists and software engineers who have experience in knowledge based systems and or logic programming and seek a hands on introduction to cooperating systems Researchers investigating autonomous agents distributed computation and cooperating systems will find fresh ideas and new perspectives on well established approaches to control organization and cooperation
