An Introduction To Formal Program Verification:

An Introduction to Formal Program Verification Ali Mili, 1985 Rigorous Software Development José Bacelar Almeida, Maria João Frade, Jorge Sousa Pinto, Simão Melo de Sousa, 2011-01-04 The use of mathematical methods in the development of software is essential when reliable systems are sought in particular they are now strongly recommended by the official norms adopted in the production of critical software Program Verification is the area of computer science that studies mathematical methods for checking that a program conforms to its specification This text is a self contained introduction to program verification using logic based methods presented in the broader context of formal methods for software engineering The idea of specifying the behaviour of individual software components by attaching contracts to them is now a widely followed approach in program development which has given rise notably to the development of a number of behavioural interface specification languages and program verification tools A foundation for the static verification of programs based on contract annotated routines is laid out in the book These can be independently verified which provides a modular approach to the verification of software The text assumes only basic knowledge of standard mathematical concepts that should be familiar to any computer science student It includes a self contained introduction to propositional logic and first order reasoning with theories followed by a study of program verification that combines theoretical and practical aspects from a program logic a variant of Hoare logic for programs containing user provided annotations to the use of a realistic tool for the verification of C programs annotated using the ACSL specification language through the generation of verification conditions and the static verification of runtime errors *Formal Methods Teaching* João F. Problem Solving, Abstraction, and Design Using C++ Frank L. Friedman, Elliot B. Koffman, Robin Koffman, 1999. This best-selling text now includes coverage of the AP string class and `apvectors`. As with the original, this book stresses problem-solving techniques while introducing students to object-oriented concepts early. The system-defined string and stream classes and a user-defined money class are used to reinforce the importance of data modeling in programming. The vector version contains all of the classic learning features readers have come to know and trust in authors Frank Friedman and Elliot Koffman. These features include case studies, program style sections, syntax display boxes, end-of-section exercises, common error sections, chapter reviews, quick-check exercises, and programming projects. High school teachers: If you are interested in using this text for your Advanced Placement Computer Science course, please send your name and address to c_apawl.com for more information. This book will come bundled with Addison-Wesley's Review for the Computer Science AP Exam in C High Schools; ordering this book should use the following ISBN: 0 201 35761 5 0201357569B04062001.

Proceedings of the Twenty-ninth SIGCSE Technical Symposium on Computer Science Education John Lewis, 1998. *First International Workshop on Larch* Ursula Martin, Jeannette Marie Wing, 1993. The papers in this volume were presented at the First International Workshop on Larch held at MIT Endicott House near Boston on 13–15 July 1992. Larch is a family of formal specification languages and tools, and this workshop was a forum for those who have designed the Larch languages, built tool support for them, particularly the Larch Prover, and used them to specify and reason about

software and hardware systems The Larch Project started in 1980 led by John Guttag at MIT and James Horning then at Xerox Palo Alto Research Center and now at Digital Equipment Corporation Systems Research Center DEC SRC Major applications have included VLSI circuit synthesis medical device communications compiler development and concurrent systems based on Lamport's TLA as well as several applications to classical theorem proving and algebraic specification Larch supports a two tiered approach to specifying software and hardware modules One tier of a specification is written in the Larch Shared Language LSL An LSL specification describes mathematical abstractions such as sets relations and algebras its semantics is defined in terms of first order theories The second tier is written in a Larch interface language one designed for a specific programming language An interface specification describes the effects of individual modules e.g state changes resource allocation and exceptions its semantics is defined in terms of first order predicates over two states where state is defined in terms of the programming language's notion of state Thus LSL is programming language independent a Larch interface language is programming language dependent
