Landscape architecture is involved in the designing of outdoor areas landmarks and structures in order to achieve environmental and social behavioral outcomes It focuses on the systematic investigation of the processes of the landscape as well as the social ecological and soil conditions It also focuses on the design of interventions to produce the desired outcome Some of the various aspects which are dealt with under this discipline are site planning stormwater management erosion control environmental restoration landscape design and parks and recreation planning It is also an important contributor to urban design pedestrian schemes waterfronts and city squares This book is a compilation of chapters that discuss the most vital concepts in the field of landscape management While understanding the long term perspectives of the topics the book makes an effort in highlighting their impact as a modern tool for the growth of the discipline It is an essential guide for both academicians and those who wish to pursue this discipline further An Introduction to the Study of Landscape Design Henry Vincent Hubbard,2015-06-26 Excerpt from An Introduction to the Study of Landscape Design We mean this book to present a general conception of landscape design which may enable a designer better to determine for himself the relations of the objects and ideas with which he is dealing and better to prepare and use in a decisive way in the individual problems of his profession the natural aptitudes and acquired knowledge which are the tools of his trade The book may also serve as a general introduction to the subject for those whose interest in it is purely that of appreciation and enjoyment of landscape designs and of natural landscapes The rapid growth of landscape architecture as an independent profession has been very recent Nearly all the trained men in the field are giving their energies to active practice rather than to theorizing or to writing It is natural therefore that the bulk of the detailed printed information on construction and planting which the landscape architect uses should have originated in the older fields of architecture and engineering and horticulture that the

discussions of general esthetics should have little specific reference to the problems of the landscape architect and that while there have been many books on special problems and special aspects of the field there should have appeared up to this time no book treating generally of landscape design adequate to the modern development of the subject and of the profession This book is not a compendium of useful information as to the practicalities of landscape construction though such a book is much needed nor is it primarily a book of pictures of completed work to which the designer may go to see how problems similar to his own have been met before It is emphatically not a book of rules which are supposed automatically to produce good design if religiously followed there are no such rules and no esthetic theory is final About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
