An Introduction to Antoine Bechamp Douglas Hume,2005-12-01 This scarce antiquarian book is a facsimile reprint of the original Due to its age it may contain imperfections such as marks notations marginalia and flawed pages Because we believe this work is culturally important we have made it available as part of our commitment for protecting preserving and promoting the world s literature in affordable high quality modern editions that are true to the original work **Béchamp Or Pasteur?** Ethel Douglas Hume,1923 **The Problem of Increasing Human Energy** Nikola Tesla,2019-02-27 NIKOLA TESLA was a gifted electrical and mechanical engineer and was one of the most influential inventors of the last century Eventually holding over 700 patents Tesla worked in a number of fields including electricity robotics radar and the wireless transmission of energy His discoveries laid the groundwork for many of the twentieth century s greatest technological advances This book contains Tesla s thoughts on humanity s relationship with the universe and also his explanation and scientific extrapolation on the technological advancements embodied in his work This text first published in Century Illustrated Magazine in June 1900 is yet another example of the genius of Nikola Tesla CONTENTS Introduction The onward movement of humanity The energy of the movement The three ways of increasing human energy 1 The first problem how to increase human mass The burning of atmospheric nitrogen 2 The second problem how to reduce the force retarding the human mass The art of telautomatics 3 The third problem how to increase the force accelerating the human mass The harnessing of the Sun s energy 4 The source of human energy The three ways of drawing energy from the Sun 5 Great possibilities offered by iron for increasing human performance Enormous waste in iron manufacture 6 Economical production of iron by a new process 7 The coming of age of aluminium The doom of the copper industry The great civilizing potency of the new metal 8 Efforts toward obtaining more energy from coal Electric transmission The gas engine The cold coal battery 9 Energy from the medium The windmill and the solar engine Motive power from terrestrial heat Electricity from natural sources 10 A departure from known methods The possibility of a self acting engine or machine The ideal way of obtaining motive power 11 First efforts to produce the self acting engine The mechanical oscillator The work of Dewar and Linde Liquid air 12 Discovery of unexpected properties of the atmosphere Strange experiments Transmission of electrical energy through one wire without return Transmission through the Earth without any wire 13 Wireless telegraphy The secret of tuning Errors in the Hertzian investigations A receiver of wonderful sensitivity 14 Development of a new principle The electrical oscillator Production of immense electrical movements The Earth responds to man Interplanetary communication now probable 15 Transmission of electrical energy to any distance without wires now possible The best means of increasing the force accelerating the human mass *The Soul of the Ape and My Friends the Baboons* Eugene Marais,2021-05-23 Eugene Marais spent three years living in the South African wilderness in close daily contact with a troop of baboons He later described this as the happiest most content time of his troubled life This period produced two works which are

testament to his research and conclusions they have very different histories Firstly there was a series of articles written in Afrikaans for the newspaper Die Vaderland They were then published in book form under the title Burgers van die Berge and were first published in an English translation in 1939 under the title My Friends the Baboons These pieces were written in a popular vein suitable to a newspaper readership and were not regarded seriously by Marais himself They are a journal a series of anecdotes and impressions The Soul of the Ape which Marais wrote in beautifully clear and precise English was the more serious scientific document however after his death in 1936 it could not be found It was lost for 32 years and was recovered in 1968 and published the following year The excellent introduction by Robert Ardrey that is included in this volume was part of the 1969 and subsequent editions of The Soul of the Ape and adds greatly to an appreciation of its importance Together these three texts give us as complete a picture as we will ever get of Marais three year study of these complex relatives of humanity and its implications for the study of consciousness *Bechamp Or Pasteur? A Lost Chapter in the History of Biology* E Douglas (Ethel Douglas) Hume, Montague R (Montague Richa Levenson, 2021-09-09 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public To ensure a quality reading experience this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy to read typeface We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant **Franz Schubert: A Biography** Henry Frost, 2019-02-01 Clarity of outline conciseness and formal beauty are excellent things in musical works but an exquisite fancy a noble imagination and a lofty poetic spirit are of infinitely greater account and no one ever possessed these inestimable gifts in richer profusion than Franz Schubert This new edition of Henry Frost s 1892 biography of Franz Schubert has been edited and revised The original references to pieces by Opus number have been replaced with the more commonly used D numbers Many illustrations of places and people have been added throughout the text and a complete catalog of Schubert s works has been included With faith man steps forth into the world Faith is far ahead of understanding and knowledge for to understand anything I must first of all believe something Faith is the higher basis on which weak understanding rears its first columns of proof reason is nothing but faith analysed Franz Schubert **My Inventions** Nikola Tesla, 2009 In 1919 Nikola Tesla wrote several articles for the magazine The Electrical Experimenter These pieces have been gathered together here In the last few decades of his life he ended up living in diminished circumstances as a recluse in Room 3327 of the New Yorker Hotel occasionally making unusual statements to the press Because of his pronouncements and the nature of his work over the years Tesla gained a reputation in popular culture as the archetypal mad scientist He

died impoverished and in debt on January 7 1943 When he passed Tesla didn't leave behind much material for the general public Also he didn't have many close friends who would have had insight into his life sufficient to write about him Since *My Inventions* is an autobiography it is unique in providing a glimpse into Tesla's mind and his private thoughts It tells about the man his motivations and the values that he held *My Inventions* is a required read for anyone wanting to know more about one of the greatest inventors of the 20th century and perhaps of all time Contents My Early Life My First Efforts at Invention My Later Endeavors The Discovery of the Tesla Coil and Transformer The Magnifying Transmitter The Art of Telautomatics

Reconstruction by Way of the Soil ,1945-12-01 Guy Wrench takes us on a wide ranging journey through the history of some of the world's most important civilizations concentrating on the relationship between humanity and the soil He shows the reader how farming practices and the care or lack of care with which the soil is treated have brought about both the rise and fall of civilizations from the ancient Romans to the Chinese and the Muslim world This history by Guy Wrench is a wide ranging history of the agricultural policies and politics of several actually many different cultures through history The author looks for parallels and similarities between the rise and decline of the cultures he discusses and what he finds is interesting and educational Guy Wrench's politics and also his optimism shine through in his writing This text has many merits as a historical survey Our agriculture is wrongly based It is a system largely directed at curing evils which it itself is responsible for It is the wisdom of the country and the traditional farmers we need now the wisdom of those who have built up long lasting agriculture and whose wisdom lies in tradition They have fashioned it through physical work and close and immediate observation through the personal intimacy with nature which we have come to associate with the poet In fact peasant life is poetic and it is so precisely because of this intimacy The music dance and art of peasants are the creative expression of their lives and as such are characteristic of their environments and the land on which they live Nothing collective or traditional as peasant life originates from people separated from the soil as are townfolk The poems and essays that played a notable part in the country life of the Chinese the Tibetan art which finds its way into every home the sylvan setting of Japanese villages of the Balinese and Burmese the vocal harmony of Swiss peasants returning from their fields the reproduction of floral beauty and colour in festive dress of so many countries these are the product of the poet that lies in every peasant's heart It is this intimacy that inspires creativity in the poet as the Greeks recognized in their choice of word for poet namely a maker or creator and which Dante voiced in the *Divine Comedy* when he wrote that the poet was not the disciple of the imagination but rather one who knows the secrets of nature Guy Wrench CONTENTS Rome The Roman foods The Roman family Roman soil erosion Farmers and nomads Contrasting pictures Banks for the soil Economics of the soil The English peasant and agricultural labourer Nyasa Tanganyika Sind and Egypt Fragmentation East and West Indies German colonies the mandates Russia South Africa Australia A kingdom of agricultural art in Europe An historical reconstruction *The Blood and its Third Element* Antoine Bechamp,2020-05-19 *The Blood and its Third Element* is Bechamp's explanation of his

position and his defense of it against Pasteur's mischief This final major work of B. Champ's embodies the culmination of his life's research This book contains in detail the elements of the microzymian theory of the organization of living organisms and organic materials It has immediate and far-reaching relevance to the fields of immunology bacteriology and cellular biology and it shows that more than 100 years ago the germ or microbial theory of disease was demonstrated by B. Champ to be without foundation There is no single cause of disease The ancients thought this and B. Champ proved it and was written out of history for his trouble The relevance of his work to the dilemmas that plague modern medical science remains as yet unrealized

Response in the Living and Non-living Jagadis Bose, 2009 JAGADISH CHANDRA BOSE was born on November 30 1858 Mymensingh Bengal India now in Bangladesh and died on November 23 1937 Giridih Bihar His work as both a physiologist and physicist led to the invention of highly sensitive instruments for the detection of minute responses by living organisms to external stimuli This enabled him to measure the similarities in response between animal and plant tissues noted by many

later researchers Bose's experiments on the quasi optical properties of very short radio waves led him to make improvements on the coherer an early form of radio detector which contributed to the development of solid state physics After earning a degree from the University of Cambridge 1884 Bose served as professor of physical science 1885-1915 at Presidency College Calcutta In 1917 he founded the Bose Institute in Calcutta which still exists today www.jbose.ac.in To facilitate his research he constructed automatic recorders capable of registering extremely slight movements these instruments produced some striking results such as his demonstration of the sense of feeling in plants Bose also found that non living matter exhibits the same types of response to stimuli as do both animal and plant matter This demonstration that everything exists in the field of consciousness was one of his most important discoveries Bose was one of the first scientists in the world to undertake interdisciplinary research by looking at plants from the vantage point of physics He subjected plant and animal tissues to various kinds of stimulus and found that they all showed an electric response Finding that this reaction occurred in metals as well as plants and animals he then proceeded to study the differences in response under various conditions He found that all materials are numbed by cold intoxicated by alcohol wearied by excessive work stupefied by anesthetics excited by electric currents stung by physical blows and killed by poison They all exhibit essentially the same reactions of fatigue and depression together with the capacity for recovery and strength and also permanent unresponsiveness or death All materials are responsive or unresponsive under the same conditions and in the same manner His investigations showed that in the entire range of responses regardless of whether the subject is metallic plant or animal there are no exceptions The living response in all its diverse modifications is a repetition of the responses seen in the inorganic Further the nature of the response is determined not by the play of an unknowable and arbitrary vital force but by laws that do not change and act equally and uniformly throughout both organic and inorganic matter This realization was always at the core of his work He sought to show that all materials react to their environments according to the same laws in other words everything exists in the same field of consciousness Om Namah Shivaya This book was originally published in 1902

The Soul of the White Ant Eugene Marais, 2009-06-21 This book by Eugene Marais is a passionate insightful account into the world of termites It is a meticulously researched expose of their complex highly structured community life Originally translated into English in 1937 the quality of research remains as relevant today as it was when it was first published This illuminating account will not only appeal to those with a scientific interest in termites but will similarly enthrall readers who are new to their captivating world An exceptional feature of his detailed research is the extraordinary psychological life of the termite While the studies are based in South Africa the extensive research also includes the termites of Magnetic Island Australia You will be taken on an exciting journey into the

amazing life of termites as their astonishing world of hierarchy and roles within their community is revealed in captivating detail His years of unceasing work on the veld led Eugene Marais to formulate his theory that the termite nest is similar in every respect to the organism of an animal He observed that the workers and soldiers resemble red and white blood cells while the fungus gardens are the digestive organ The queen functions as the brain controlling the collective mind and the sexual flight of the kings and queens is similar in every aspect to the escape of spermatozoa and ova Reviews I have never read a book written in such a unique style It is as though Eugene Marais breathes life into the words animating the lives and struggles of the white ants in such a way that they almost seem human As a safari Guide in the Okavango Botswana for many years I used this book as a basis for presenting a fascination for the smaller creatures of the African bush my home for my entire life and which I was privileged to share with many clients from different countries Termite mounds are really interesting and Eugene Marais compared the infrastructure of a termitary to that of the human body Writing from the heart this scientific author instills a wonder in the reader of the incredible intricacies of nature in a light hearted easily readable manner This book doesn't quit when it comes to fascinating insights about termites I read it with almost no knowledge of what these tiny creatures are capable of and I was transfixed by these rich and complex insect societies For the layman this is an entertaining and informative introduction to a very amazing creature Brilliant and thought provoking material Contents 1 The Beginning of a Termitary 2 Unsolved Secrets 3 Language in the Insect World 4 What is the Psyche 5 Luminosity in the Animal Kingdom 6 The Composite Animal 7 Somatic Death 8 The Development of the Composite Animal 9 The Birth of the Termite Community 10 Pain and Travail in Nature 11 Uninherited Instincts 12 The Mysterious Power which Governs 13 The Water Supply 14 The First Architects 15 The Queen in her Cell *The Blood and Its Third Anatomical Element* Antoine Béchamp, 1911 Health Research Books reprint with new foreword of the 1912 translation which was published in London by John Ouseley Limited **The Wheel of Health** Guy T Wrench, 2009-07 The Hunza were people were renowned for their extraordinary physique and health which Dr Wrench found by the fact that their food was not made sophisticated by the artificial processes applied by modern processed food How these processes affect our food is dealt with in great detail
