The presentation is descriptive and fairly elementary, requiring only some programming experience in a high-level language such as COBOL, FORTRAN, or PASCAL. Topics covered include computer-based information systems, structured analysis, structured design, structured implementation, and contemporary issues in system development. The book contains many case studies.

Burton Swanson, 1993 Advances in Intelligent Systems Francesco Carlo Morabito, 1997

Intelligent Systems can be defined as systems whose design mainly based on computational techniques is supported in some parts by operations and processing skills inspired by human reasoning and behaviour. Intelligent Systems must typically operate in a scenario in which non-linearities are the rule and not as a disturbing effect to be corrected. Finally, Intelligent Systems also have to incorporate advanced sensory technology in order to simplify man-machine interactions. Several algorithms are currently the ordinary tools of Intelligent Systems. This book contains a selection of contributions regarding Intelligent Systems by experts in diverse fields. Topics discussed in the book are: Applications of Intelligent Systems in Modelling and Prediction of Environmental Changes, Cellular Neural Networks for NonLinear Filtering, NNs for Signal Processing, Image Processing, Transportation Intelligent Systems, Intelligent Techniques in Power Electronics, Applications in Medicine and Surgery, Hardware Implementation and Learning of NNs.
