Analysis of Infectious Disease Problems (Covid-19) and Their Global Impact

Praveen Agarwal, Juan J. Nieto, Michael Ruzhansky, Delfim F. M. Torres, 2021-09-29 This edited volume is a collection of selected research articles discussing the analysis of infectious diseases by using mathematical modelling in recent times. Divided into two parts, the book gives a general and country-wise analysis of COVID-19. Analytical and numerical techniques for virus models are presented along with the application of mathematical modelling in the analysis of their spreading rates and treatments. The book also includes applications of fractional differential equations as well as ordinary partial and integrodifferential equations with optimization methods. Probability distribution and their bio-mathematical applications have also been studied. This book is a valuable resource for researchers, scholars, biomathematicians, and medical experts.

Infectious Disease Informatics and Biosurveillance Daniel Zeng, Hsinchun Chen, Carlos Castillo-Chavez, William B. Lober, Mark Thurmond, 2010-11-16 This book on Infectious Disease Informatics (IDI) and biosurveillance is intended to provide an integrated view of the current state of the art, identify technical and policy challenges and opportunities, and promote cross-disciplinary research that takes advantage of novel methodology and what we have learned from innovative applications. This book also fills a systemic gap in the literature by emphasizing informatics-driven perspectives, e.g., information system design, data standards, computational aspects of biosurveillance algorithms, and system evaluation. Finally, this book attempts to reach policy makers and practitioners through the clear and effective communication of recent research findings in the context of case studies in IDI and biosurveillance, providing hands-on, in-depth opportunities to practitioners to increase their understanding of value, applicability, and limitations of technical solutions. This book collects the state-of-the-art research and modern perspectives of distinguished individuals and research groups on cutting-edge IDI technical and policy research and its application in biosurveillance. The contributed chapters are grouped into three units. Unit I provides an overview of recent biosurveillance research while highlighting the relevant legal and policy structures in the context of IDI and biosurveillance ongoing activities. It also identifies IDI data sources while addressing information collection, sharing, and dissemination issues, as well as ethical considerations. Unit II contains survey chapters on the types of surveillance methods used to analyze IDI data in the context of public health and bioterrorism. Specific computational techniques covered include text mining, time series analysis, multiple data streams, methods ensembles of surveillance methods, spatial analysis, and visualization, social network analysis, and agent-based simulation. Unit III examines IT and decision support for public health event response and bio-defense. Practical lessons learned in developing public health and biosurveillance systems, technology adoption, and syndromic surveillance for large events are discussed. The goal of this book is to provide an understandable interdisciplinary IDI and biosurveillance reference, either used as a standalone textbook or reference for students, researchers, and practitioners in public health, veterinary medicine, biostatistics, information systems, computer science, and public administration and policy.

Analysis of Infectious Disease Incidence and Complex Survey Data in Space and Time Qi Dong, 2020 Immunization is one of the most cost-effective health interventions for

preventing infectious diseases Despite the tremendous advances in global immunization coverage in the past few decades challenges remain in many low and middle income countries LMICs Timely and comprehensive evaluation of immunization program performance especially at the sub national level is essential for monitoring progress and planning future interventions Since the administrative data in many LMICs is unreliable due to inadequate health information systems other data sources such as disease surveillance systems and household surveys are turned to to obtain valid estimates for policy guidance This dissertation develops statistical methods for analyzing infectious disease incidence and complex survey data in space and time to facilitate planning and assessing immunization programs in LMICs In particular we develop space time smoothing models for estimating sub national measles routine immunization coverage using survey data and build time series models for estimating efficacy of measles supplementary immunization activities using incidence data We also consider vaccination coverage mapping via Bayesian geostatistical modeling of household survey data demonstrate appropriate ways of accounting for the survey design in modeling and develop a novel approach to coverage map presentation to allow comparison and control of the overall map uncertainty level
