Econometrics of Panel Data Erik

Biørn, 2016-10-13 Panel data is a data type increasingly used in research in economics social sciences and medicine Its primary characteristic is that the data variation goes jointly over space across individuals firms countries etc and time over years months etc Panel data allow examination of problems that cannot be handled by cross section data or time series data Panel data analysis is a core field in modern econometrics and multivariate statistics and studies based on such data occupy a growing part of the field in many other disciplines The book is intended as a text for master and advanced undergraduate courses It may also be useful for PhD students writing theses in empirical and applied economics and readers conducting empirical work on their own The book attempts to take the reader gradually from simple models and methods in scalar simple vector notation to more complex models in matrix notation A distinctive feature is that more attention is given to unbalanced panel data the measurement error problem random coefficient approaches the interface between panel data and aggregation and the interface between unbalanced panels and truncated and censored data sets The 12 chapters are intended to be largely self contained although there is also natural progression Most of the chapters contain commented examples based on genuine data mainly taken from panel data applications to economics Although the book inter alia through its use of examples is aimed primarily at students of economics and econometrics it may also be useful for readers in social sciences psychology and medicine provided they have a sufficient background in statistics notably basic regression analysis and elementary linear algebra

A Companion to Econometric Analysis of Panel Data Badi H.

Baltagi, 2009-06-22 This book is a companion to Baltagi's 2008 leading graduate econometrics textbook on panel data entitled *Econometric Analysis of Panel Data* 4th Edition The book guides the student of panel data econometrics by solving exercises in a logical and pedagogical manner helping the reader understand learn and apply panel data methods It is also a helpful tool for those who like to learn by solving exercises and running software to replicate empirical studies It works as a complementary study guide to Baltagi 2008 and also as a stand alone book that builds up the reader's confidence in working out difficult exercises in panel data econometrics and applying these methods to empirical work The exercises start by providing some background information on partitioned regressions and the Frisch Waugh Lovell theorem Then it goes through the basic material on fixed and random effects models in a one way and two way error components models basic estimation test of hypotheses and prediction This include maximum likelihood estimation testing for poolability of the data testing for the significance of individual and time effects as well as Hausman's test for correlated effects It also provides extensions of panel data techniques to serial correlation spatial correlation heteroskedasticity seemingly unrelated regressions simultaneous equations dynamic panel models incomplete panels measurement error count panels rotating panels limited dependent variables and non stationary panels

Econometric Analysis of Panel Data Badi H.

empirical examples from panel data literature and includes new data sets The use of the standard software packages in the field i e STATA LIMDEP TSP SAS are illustrated with new examples The text has also been fully updated with new material on non stationary models unit roots in panels and cointegration prediction in panels serial correlation heteroskedasticity and new results on GMM in dynamic panel data models There is also website providing supplementary material for lecturers

Panel Data Analysis using EViews I. Gusti Ngurah Agung,2013-12-31 A comprehensive and accessible guide to panel data analysis using EViews software This book explores the use of EViews software in creating panel data analysis using appropriate empirical models and real datasets Guidance is given on developing alternative descriptive statistical summaries for evaluation and providing policy analysis based on pool panel data Various alternative models based on panel data are explored including univariate general linear models fixed effect models and causal models and guidance on the advantages and disadvantages of each one is given Panel Data Analysis using EViews Provides step by step guidance on how to apply EViews software to panel data analysis using appropriate empirical models and real datasets Examines a variety of panel data models along with the author s own empirical findings demonstrating the advantages and limitations of each model Presents growth models time related effects models and polynomial models in addition to the models which are commonly applied for panel data Includes more than 250 examples divided into three groups of models stacked unstacked and structured panel data together with notes and comments Provides guidance on which models not to use in a given scenario along with advice on viable alternatives Explores recent new developments in panel data analysis An essential tool for advanced undergraduate or graduate students and applied researchers in finance econometrics and population studies Statisticians and data analysts involved with data collected over long time periods will also find this book a useful resource

Essays in Panel Data Econometrics Marc Nerlove,2005-11-10 This volume collects seven of Marc Nerlove s previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey s monograph published in 1861 Since Professor Nerlove s 1966 *Econometrica* paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods Panel Data Econometrics Donggyu Sul,2019-02-07 In the last 20 years econometric theory on panel data has developed rapidly particularly for analyzing common behaviors among individuals over time Meanwhile the statistical methods employed by applied

researchers have not kept up to date This book attempts to fill in this gap by teaching researchers how to use the latest panel estimation methods correctly Almost all applied economics articles use panel data or panel regressions However many empirical results from typical panel data analyses are not correctly executed This book aims to help applied researchers to run panel regressions correctly and avoid common mistakes The book explains how to model cross sectional dependence how to estimate a few key common variables and how to identify them It also provides guidance on how to separate out the long run relationship and common dynamic and idiosyncratic dynamic relationships from a set of panel data Aimed at applied researchers who want to learn about panel data econometrics by running statistical software this book provides clear guidance and is supported by a full range of online teaching and learning materials It includes practice sections on MATLAB STATA and GAUSS throughout along with short and simple econometric theories on basic panel regressions for those who are unfamiliar with econometric theory on traditional panel regressions *Analysis of Panel Data* Cheng Hsiao,2014-11-24 This book provides a comprehensive coherent and intuitive review of panel data methodologies that are useful for empirical analysis Substantially revised from the second edition it includes two new chapters on modeling cross sectionally dependent data and dynamic systems of equations Some of the more complicated concepts have been further streamlined Other new material includes correlated random coefficient models pseudo panels duration and count data models quantile analysis and alternative approaches for controlling the impact of unobserved heterogeneity in nonlinear panel data models

Econometric Analysis of Cross Section and Panel Data Jeffrey M. Wooldridge,2002 A comprehensive state of the art text on microeconomic methods **Applied Panel Data Analysis for Economic and Social Surveys** Hans-Jürgen Andreß,Katrin Golsch,Alexander W. Schmidt,2013-01-24 Many economic and social surveys are designed as panel studies which provide important data for describing social changes and testing causal relations between social phenomena This textbook shows how to manage describe and model these kinds of data It presents models for continuous and categorical dependent variables focusing either on the level of these variables at different points in time or on their change over time It covers fixed and random effects models models for change scores and event history models All statistical methods are explained in an application centered style using research examples from scholarly journals which can be replicated by the reader through data provided on the accompanying website As all models are compared to each other it provides valuable assistance with choosing the right model in applied research The textbook is directed at master and doctoral students as well as applied researchers in the social sciences psychology business administration and economics Readers should be familiar with linear regression and have a good understanding of ordinary least squares estimation [Panel Data Analysis](#) Stephen Zamore,2022 The purpose of this article is to provide a summary of linear panel data analysis in simple language without mathematical expression The summary serves as a quick reference for many researchers who want to utilize panel data techniques in their research The article starts by explaining what a panel dataset is and how it differs from time series and

cross section datasets Next it explains the main linear panel data models which are then summarized graphically Panel data techniques solve two main problems 1 omitted variable bias individual fixed effects or unobserved heterogeneity and 2 endogeneity bias As shown in Figure 1 dynamic GMM models and some instrumental variable IV models can solve these two problems

Linear Panel Analysis Ronald C. Kessler,2014-06-28 Linear Panel Analysis **Analysis of Change** Uwe Engel,Jost Reinecke,2012-05-07 No detailed description available for Analysis of Change **Panel Data Analysis** Simonetta Longhi,2020 Panel data are a particular type of longitudinal data Longitudinal data consist of repeated observations over time for the same unit of analysis This entry discusses practicalities of analysing longitudinal data particularly individual and household panel data After a brief discussion of the most important features of panel data and their advantages this entry discusses issues such as missing data and representativeness of the sample over time This is followed by a brief overview of the file structure of the most commonly used individual and household panels and the main steps necessary for data preparation The most commonly used panel data estimators for the case of continuous dependent variables are then briefly discussed as well as how to model individual unobserved heterogeneity and how to select the most appropriate estimator This is followed by an introduction to estimators for limited dependent variables Finally the entry discusses missing data survey weights and issues arising when analysing macro instead of individual panels The focus is on the intuition behind the different concepts and techniques
