Kitchens,1998 Modern statistics is about analysis and interpretation of data rather than about calculations Kitchens is about data analysis and interpretation The books distinguishing aspect is its strong emphasis on data analysis It features the computer and to an exceptional degree graphical data analysis It also carries data analytic ideas throughout the book including the chapters on inference categorical data regression and ANOVA *Introduction to Data Analysis Handbook* Brian Richmond,2006 This Handbook provides an introduction to basic procedures and methods of data analysis The authors provide a framework to guide program staff in their thinking about these procedures and methods and their relevant applications in MSHS Migrant and Seasonal Head Start settings Accordingly this Handbook was developed to support the work of MSHS staff across content areas This Handbook was created because using data in meaningful ways includes many possibilities and a great deal of information Some of this information is complex and highly dependent upon specialized knowledge However there are many ways of using data that are more basic and that involve relatively simple procedures Their purpose is to provide MSHS programs with a basic framework for thinking about working with and ultimately benefiting from an increased ability to use data for program purposes Section I of the Handbook provides introductory information Section I includes the presentation of the guiding principles they use in presenting information as well as the articulation of specific learning objectives In Section II they present an introduction to ways of thinking about data and make the distinction between two basic types of data quantitative and qualitative Section III outlines information that they hope will assist program staff understand how to conceptualize data collection and its analysis as a process In Section IV the authors discuss management considerations that should be addressed in order to gather and analysis data in an efficient and effective way in your program The authors present a framework for managing the process of data collection and analysis Because using data for program purposes is a

complex undertaking it calls for a process that is both systematic and organized over time In Section V of the Handbook they examine data analysis using examples of data from each of the Head Start content areas They explore examples of how data analysis could be done They identify and describe trends that programs collect Finally they offer a perspective of how data lends itself to different levels of analysis for example grantee wide by delegate agency and or center or classroom level Their intent is to demonstrate how the different analytical procedures and methods can be powerful and effective tools for MSHS managers Specific procedures and methods of data analysis are discussed with clear ways of using and working with data in order to identify results Here procedures and methods for working with both quantitative and qualitative data are presented Appended are 1 Foundations for Data Analysis Applications in MSHS 2 Using Excel To Help Analyze Your Quantitative Data and 3 Supplemental Resources
