

Essential Components of Project Planning (2/3)

This slide provides information about some of the essential components that are necessary in order to create an effective project plan.

Project Schedule

- Since the projects have a fixed start and finish, the schedule is usually an essential piece of the puzzle.
- External stakeholders are also interested in setting deadlines. Similarly, adjustments to the mid-project schedule are usually issues that require active management.
- Developing a project schedule does not need to be a major undertaking requiring costly project management software.

Project Budget

- The temporary nature of the project needs a well-defined budget in place and that is actively managed to prevent it from sprouting roots and growing like an obnoxious weed.
- Just like the schedule, for small projects the budget can be added to the WBS.

Quality

- When a project produces a deliverable there are always quality standards in play.
- Each industry has standard quality success metrics that can be checked and defined with relative ease for the project, such as ASTM, IEEE, or ISO-9001.
- These organizations are engaged in the development of quality standards, which is why they are fantastic sources for ensuring project quality.

HR Planning

- Project team members are also one of the most critical components of the efficient project chain.
- They are often typically very time consuming for the project manager – if they recruit new employees or procure them from a larger company, they need to be trained and their productivity needs to be actively monitored.
- HR planning consists of the items such as resources requirements, project team acquisition, training and development and management activities.
